Preface v

1. Sequential Advanced Guide Signing For Work Zone Related Rerouting On Highways 1
   K. Brijs, E. Jongen, G. Wets, and T. Brijs
   1.1 Background ................................ 1
   1.2 Problem Statement ........................... 4
   1.3 Objectives ................................ 5
   1.4 Research Questions ........................... 5
   1.5 Methodology ................................ 6
   1.6 Results ................................ 9
   1.7 Discussion ................................ 14
   1.8 Conclusion and Recommendations ............. 16

2. The Relationship between Driver Fatigue and Monotonous Road Environment 19
   X. Zhao and J. Rong
   2.1 Introduction ................................ 19
   2.2 Literature Review ............................ 20
   2.3 The Road Environment Monotony Evaluation ........ 24
   2.4 Methodology ................................ 28
   2.5 Data Analysis and Results ...................... 32
2.6 Conclusions .......................................................... 36

3. Driving Situation Awareness in Transport Operations 37
   C. Ding, Y. Mao, W. Wang, and M. Baumann

   3.1 Introduction ...................................................... 37
   3.2 Models of Situation Awareness .............................. 39
   3.3 Importance of Situation Awareness ......................... 44
   3.4 Measurements of Situation Awareness during Driving ... 46
   3.5 Driver Distraction on Situation Awareness ................. 50
   3.6 Applications of Situation Awareness ....................... 54
   3.7 Conclusions ...................................................... 55

4. Container Drayage Operations at Intermodal Terminals 57
   A. Caris and G.K. Janssens

   4.1 Introduction ...................................................... 57
   4.2 Deterministic Annealing Algorithm ......................... 59
   4.3 Numerical Experiments ...................................... 61
   4.4 Conclusions and Future Research ........................... 70

5. Application of Genetic Algorithm to Optimize Transit Schedule
   under Time-Dependent Demand 71
   H. Niu

   5.1 Introduction ...................................................... 71
   5.2 Problem Statement .............................................. 73
   5.3 Model ............................................................. 76
   5.4 Genetic Algorithm ............................................. 80
   5.5 Numerical Example ............................................. 83
   5.6 Conclusions ...................................................... 85

6. Validation of an Activity-Based Traffic Demand Model for Flanders 89
   B. Kochan, T. Bellemans, D. Janssens, and G. Wets

   6.1 Introduction ...................................................... 89
   6.2 FEATHERSs ...................................................... 90
6.3 Albatross ........................................ 91
6.4 Incorporating the ALBATROSS Model inside FEATHERS ........ 91
6.5 Travel Demand and Traffic Assignment Model Chain .......... 95
6.6 Validation of Flemish Simulation Results ......................... 97
6.7 Conclusions and Discussion ................................104

7. **Driver Behaviour in Conflict with Redcrossing Pedestrians** 107
   
   *X. Jiang, W. Wang, and K. Bengler*
   
   7.1 Introduction ........................................ 107
   7.2 Vehicle-Pedestrian Conflict and Driver Behaviour .......... 108
   7.3 Methodologies ....................................... 112
   7.4 Data Analysis ....................................... 120
   7.5 Driver Yielding Behaviour Based on Logit Model .......... 125
   7.6 Conclusions ........................................ 126

8. **Cellular Automaton Model and Simulation of Traffic and Mobility Operations** 129
   
   *H. Xiong, X. Guo, and W. Wang*
   
   8.1 Introduction ........................................ 129
   8.2 Traffic CA model .................................... 131
   8.3 Pedestrian CA model ................................ 139
   8.4 Paired pedestrian CA model and simulation ............... 146
   8.5 Conclusion ........................................ 157

9. **A Data Imputation Method with Support Vector Machines** 159
   
   *B. Yang, D. Janssens, D. Ruan, T. Bellemans, and G. Wets*
   
   9.1 Introduction ........................................ 159
   9.2 Data Description .................................... 161
   9.3 Data Imputation Method with SVM ........................ 162
   9.4 Data Imputation Method with PNN and LDA ............... 166
   9.5 Results and Discussions ................................ 168
   9.6 Conclusions ........................................ 170
10. **VLSN Search Method Based Hubs Location and Service Frequency Determination**

   *W. Xu and S. He*

   10.1 Introduction ................................................. 173
   10.2 Problem Description .......................................... 177
   10.3 CMST for Hub Locations in Rail and Truck Freight Transportation Network 180
   10.4 VLSN for the Hub Location Problem .......................... 182
   10.5 Service Frequency Determination for the Hub-Spoke Network ....... 186
   10.6 Case Studies .................................................. 188
   10.7 Conclusions .................................................. 193

11. **Quantitative Risk Assessment for Traffic and Mobility Safety**

   *W. Guo, W. Wang, H. Bubb, S. Xia, and F. Li*

   11.1 Introduction .................................................. 197
   11.2 Basic Concepts, Definitions of Event, Incident and Accident ...... 199
   11.3 Fundamentals of Incident Tree Model and Incident Tree Analysis Method 202
   11.4 Incident Tree Model ........................................... 209
   11.5 Incident Tree Analysis ......................................... 216
   11.6 Concluding Remarks ............................................ 221

12. **Investigating the Progress towards Sustainable Road Transport in Europe**

   *Y. Shen, E. Hermans, T. Brijs, G. Wets, and K. Vanhoof*

   12.1 Introduction ................................................... 223
   12.2 Efficiency Measurement based on a DEA Model with Undesirable Factors 227
   12.3 DEA-based Malmquist Index for Productivity Change Assessment .... 230
   12.4 Application and Results on Sustainable Road Transport Evaluation .... 234
   12.5 Conclusions .................................................... 240

H. Guo, W. Wang, and H. Bubb

13.1 Introduction ................................ 243
13.2 Basic Concept and Theory ...................... 245
13.3 Reliability Analysis of Pedestrian Crossing Behavior at Signalized Crosswalk ................................ 256
13.4 Conclusion ................................ 265

14. Applications of Multi-Source Traffic Data on Mobility Analysis for Urban Road Network

J. Weng, J. Rong, L. Liu, and Y. Zhai

14.1 Introduction ................................ 267
14.2 Available Data Sources ........................... 268
14.3 Travel Speed Computation and Forecasting .................. 272
14.4 Multi-Source Data Based Traffic Incident Detection ................. 288
14.5 Conclusions and Future Works ...................... 295

15. Practical Methods in Traffic Demand Forecasting Model

L. Yao and L. Sun

15.1 Introduction ................................ 297
15.2 The Application of Disaggregate Model in Traffic Demand Forecasting . 298
15.3 The Application of Entropy Model in Traffic Demand Forecasting ... 311
15.4 Conclusions ................................. 319

Bibliography .............................. 321
Computational Intelligence for Traffic and Mobility
Wang, W.; Wets, G. (Eds.)
2013, XII, 340 p., Hardcover
ISBN: 978-94-91216-79-4
