# Contents

## 1 Introduction
- 1.1 Look Back on Optical Digital Data Storage
  - 1.1.1 Progress of Digital Data Storage
  - 1.1.2 From VCD to Blu-Ray Disc
- 1.2 Research and Development of Optical Storage in China
  - 1.2.1 Multi-wavelength and Multilevel Storage
  - 1.2.2 Volume Holographic Storage
  - 1.2.3 Near-Field Optical Storage
  - 1.2.4 Big Data Storage System Integration
  - 1.2.5 New Storage Materials and Medium
  - 1.2.6 Chinese Blue High Density Disc
- 1.3 The Advanced Efforts for Multi-dimension Optical Storage
  - 1.3.1 3-Dimension (3D) Optical Storage
  - 1.3.2 5-Dimensional Optical Storage
  - 1.3.3 Negative Refraction Index Materials Application to SIL 3-Dimensional Storage
  - 1.3.4 The Higher Order Radially Polarized Beams Application in SIL
  - 1.3.5 Other Schemes for Multi-value Optical Storage
- 1.4 Frontier Science and Technologies Related to Optical Storage
  - 1.4.1 Ultraviolet Optical Storage
  - 1.4.2 Plasmonic Optical Storage
  - 1.4.3 X-Ray Storage
  - 1.4.4 Nanoprobe and Molecular Polymer Storage
  - 1.4.5 Molecular Polymer Storage
  - 1.4.6 Persistent Spectral Holeburning
  - 1.4.7 Coherent Transient Memory
  - 1.4.8 Molecular Storage
  - 1.4.9 All-Optical Magnetic Recording
  - 1.4.10 Electronic Quantum Holography
  - 1.4.11 Scanning Electron Beam Record
2 Mechanism of Multidimensional Optical Storage
2.1 Photophysics and Photochemistry
  2.1.1 Light Absorption
  2.1.2 Luminescence
2.2 Photoinduced Electron Transfer Process
  2.2.1 Emission Lifetime
  2.2.2 Ground and Excited State Molecular Interactions
  2.2.3 Energy and Electron Transfer
2.3 Other Actions of Photon to Materials
  2.3.1 Nonlinear Optical Action
  2.3.2 Photoconductive and Photonic Polymers
  2.3.3 Photosynthesis
  2.3.4 Purple Photosynthetic
2.4 Photophysical Properties of Organometallic Polymers
2.5 Inorganic Photochemistry and Photocatalysis
  2.5.1 Electron Storage on ZnO Particles
  2.5.2 Particle Size and Absorption
  2.5.3 Laser Flash Photolysis
  2.5.4 Particle Size and Absorption Threshold
  2.5.5 Blue Shift of Absorption upon Illumination
  2.5.6 Reducing Reactions and Oxidizing Radicals
  2.5.7 Essential Criteria of Photochemical Reactions
  2.5.8 Main Types of Photochemical Reactions
  2.5.9 Solvents
  2.5.10 Direct Sensitized Photolysis
2.6 Reaction Control
  2.6.1 Side Reactions Can Easily Become the Major Track
  2.6.2 Quantum Yield and Chemical Yield
  2.6.3 Photochemical Reactions
  2.6.4 Alkenes
4 Super Resolution and Laser Sources ......................................................... 221
  4.1 Optical Super Resolution and Micro-aperture Laser ......................... 222
  4.2 Micro-aperture Semiconductor Laser ................................................. 232
    4.2.1 Micro-aperture Laser for NFO Data Storage ............................. 232
    4.2.2 Vertical-Cavity Surface-Emitting Lasers (VCSEL)s ...................... 233
    4.2.3 Modeling of Nano-aperture VCSELS ........................................ 234
    4.2.4 Design of the Nano-aperture VCSEL ....................................... 236
    4.2.5 Numerical Model .............................................................. 238
    4.2.6 Calculation Results ........................................................ 239
    4.2.7 Speciality of Spectrum ..................................................... 243
  4.3 Optically Injected Quantum Dot Lasers ............................................ 247
    4.3.1 Epitaxy Growth (MBE, MOVPE) .............................................. 247
    4.3.2 QD-Lasers ................................................................. 249
    4.3.3 Optical Confinement Factor ............................................... 250
    4.3.4 Gain and Threshold ....................................................... 251
  4.4 Quantum Dot Laser Model .......................................................... 257
    4.4.1 One-Parameter Bifurcation Diagrams ..................................... 261
    4.4.2 Two-Parameter Bifurcation Diagrams and Path Continuation .......... 264
  4.5 Impact of the Pump Current on the Dynamics .................................... 267
    4.5.1 Impact of Carrier Lifetimes on the Dynamics ............................ 268
  4.6 Photon Rate Equation .................................................................. 273
    4.6.1 High-Speed Quantum Dot Lasers ............................................ 274
    4.6.2 Factors Limiting High-Speed Operation of QD Lasers ................. 276
    4.6.3 Tunnel Injection and Acceptor Doping in QD Lasers ................... 277
    4.6.4 Tunnel Injection Lasers with p-Doping ................................... 279
  4.7 Static/Dynamic Characteristics of QD Lasers ................................... 280
    4.7.1 Static Characteristics of QD Lasers ....................................... 280
    4.7.2 Small Signal Modulation Response ......................................... 283
    4.7.3 Dynamic Properties and $\alpha$-Factor ................................... 285
    4.7.4 Quantum Dot Lasers Future Trends ....................................... 287
    4.7.5 Edge Emitting and Vertical Cavity Quantum Dot Lasers ................ 288
    4.7.6 Infrared Emission in Quantum Dot Lasers ................................ 290
    4.7.7 Extension of the Spectral Range of GaAs-Based Devices ................ 291
    4.7.8 Quantum Dot Composites .................................................... 292
    4.7.9 Advantages and Disadvantages of QD Lasers ............................. 292
  4.8 Femtosecond, UV, and Multiwavelength Lasers .................................. 293
    4.8.1 Femtosecond Laser ........................................................... 293
    4.8.2 Supercontinuum Generation (SCG) Subpicosecond Laser ............... 294
    4.8.3 UV and Deep UV Lasers ..................................................... 294
6.1.2 Two Wavelength Two-Photon Absorption (Type 2)

6.2 Vertical Resolution of 3D Optical Storage

6.3 Stereo-Multidimensional Storage Medium

6.3.1 Stereo 3D Storage Medium

6.3.2 Multidimensional Holomem Materials

6.4 Multilayer Parallel Read/Write

6.4.1 WORM Multilayer Storage System

6.4.2 Multibeam Readout

6.5 Adaptive Aberration Correction

6.5.1 MEMS Mirror to Compensate Spherical Aberration

6.5.2 Residual Asymmetric Aberration Measurement

6.5.3 Correction Aberrations with Deformable Mirror of Liquid Crystal

6.6 Stereo Optical Solid State Memory

6.6.1 Two-Wavelength (ℏm + ℏm′) Two-Photon (Type 2) Optical Solid State Memory

6.6.2 Photochromical Multiwavelength and Multilevel 3D Optical Solid State Memory

6.7 Multivalued Polarization-Sensitive Storage

6.7.1 Data Rate of Phase Multilevel Recording

6.7.2 PRML for Phase Multilevel Signal Process

6.8 Multidimensional Codes

6.8.1 Product Codes

6.8.2 Products of Single Parity-Check Codes

6.8.3 Decoding of Product-SPC Codes

6.8.4 Multidimensional Parity-Check Codes

6.8.5 Burst-Error-Correction Capability of MDPCs with Iterative Soft-Decision Decoding

6.8.6 White Gaussian Noise Channel

6.8.7 Bursty Channels

6.8.8 Concatenated MDPC Codes and Turbo Codes
