Contents

Part I Introduction

1 Overview of Imprecise-Information Processing ......................... 3
  1.1 What Is Imprecise Information? .................................. 3
  1.2 Origin of Imprecise Information ................................. 4
  1.3 Distinction and Correlation Between Imprecision and Uncertainty of Information ...................................... 6
  1.4 Research Issues of Imprecise-Information Processing ........ 8
  1.5 Significance of Studying Imprecise-Information Processing and the Related Disciplines and Fields .......... 11
  1.6 A Survey of Research on Imprecise-Information Processing .............................................................. 14
  1.7 Work of the Book .................................................... 17
References ................................................................. 19

Part II Formation of Flexible Linguistic Values and Their Mathematical Models: Formation Principles and Modeling of Imprecise Information

2 Flexible Concepts and Flexible Linguistic Values and Their Mathematical Models ........................................... 23
  2.1 Flexible Clustering in Range of Numerical Values and Corresponding Flexible Concepts and Flexible Linguistic Values .............................................................. 23
  2.2 Denotative Model of a Flexible Concept ....................... 28
    2.2.1 Core and Support Set ........................................... 28
    2.2.2 Membership Function ......................................... 28
  2.3 Connotative Model of a Flexible Concept—Consistency Function .............................................................. 34
  2.4 Connection and Distinction Between Membership Function and Consistency Function ............................... 38
3 Multidimensional Flexible Concepts and Flexible Linguistic Values and Their Mathematical Models  
3.1 Measurement Space and Corresponding Flexible Clustering ........................................ 46  
3.2 Flexible Clustering with Respect to Partial Coordinate Components ................................ 48  
3.3 Square Flexible Clustering and Circular Flexible Clustering ........................................... 51  
3.3.1 Square Flexible Clustering and Flexible Squares ..................................................... 51  
3.3.2 Circular Flexible Clustering and Flexible Circles ..................................................... 55  
3.4 Datum-Based Flexible Clustering, “About ××” and “Near ××” ........................................ 60  
3.4.1 Point-Based Flexible Clustering and Flexible Points ................................................. 60  
3.4.2 Line-Based Flexible Clustering and Flexible Lines ................................................... 63  
3.4.3 Plane-Based Flexible Clustering and Flexible Planes ............................................... 68  
3.5 Universal Mathematical Models of Flexible Properties (Concepts) ................................ 69  
3.6 Flexible Relations (Concepts) and Their Mathematical Models ........................................ 72  
3.6.1 Flexible Clustering in a Product Space ........................................................................ 72  
3.6.2 Space Transformation and the Formation of a Flexible Relation (Concept) ............... 73  
3.6.3 Universal Mathematical Models of Flexible Relations (Concepts) .............................. 76  
3.7 Summary ......................................................................................................................... 78  
Reference ................................................................................................................................ 79
Part III  Fundamental Theories of Flexible Sets and Flexible Linguistic Values: Mathematical Theories on Imprecise Information

5  Flexible Sets and Operations on Flexible Sets ............................................. 99
   5.1 Types and Definitions of Flexible Sets .............................................. 99
   5.2 Flexible Sets Versus Fuzzy Sets ...................................................... 103
   5.3 Flexible Sets Versus Rough Sets ...................................................... 105
   5.4 Basic Relations Between Flexible Sets .............................................. 107
   5.5 Basic Operations on Flexible Sets ..................................................... 109
      5.5.1 Intersection, Union, Complement, and Difference of General Flexible Subsets ...... 109
      5.5.2 Intersection and Union of Orthogonal Flexible Subsets ......................... 116
   5.6 Cartesian Product of Flexible Sets .................................................... 120
   5.7 Flexible Relations ............................................................................ 124
   5.8 Summary ......................................................................................... 126
References ................................................................................................. 127

6  Flexible Linguistic Values and Operations on Flexible Linguistic Values ................................................................. 129
   6.1 Types of Flexible Linguistic Values ...................................................... 129
       6.1.1 Atomic Linguistic Values, Basic Linguistic Values, and Composite Linguistic Values .......... 129
       6.1.2 One-Dimensional Linguistic Values and Multidimensional Linguistic Values .......... 130
       6.1.3 Full-Peak Linguistic Values and Semi-Peak Linguistic Values ....................... 130
       6.1.4 Property-Type Linguistic Values and Relation-Type Linguistic Values .......... 130
   6.2 Flexible Partition of a Space and Basic Flexible Linguistic Values ................................................................................. 131
       6.2.1 Flexible Partition of a One-Dimensional Space and Basic Flexible Linguistic Values .......... 131
       6.2.2 Flexible Partition of a Multidimensional Space and Basic Flexible Linguistic Values .......... 132
       6.2.3 Extension and Reduction of Basic Flexible Linguistic Values ....................... 134
6.3 Logical Operations on Flexible Linguistic Values on the Same Space ........................................... 135
6.3.1 Conjunction and Disjunction .......................... 135
6.3.2 Negation .................................................. 136
6.4 Compositions and Decompositions of Flexible Linguistic Values on Distinct Spaces .................. 138
6.4.1 Logical Composition and Decomposition, Combined Linguistic Values ............................ 138
6.4.2 Algebraical Composition and Decomposition, Synthetic Linguistic Value ............................. 140
6.5 Relatively Negative Flexible Linguistic Values and Medium Point ............................................. 143
6.6 Complementary Flexible Partition of a Space and Complementary Flexible Linguistic Values ........ 146
6.6.1 Complementary Flexible Partition of a Space, Complementary Flexible Classes and Complementary Flexible Linguistic Values ................................. 146
6.6.2 Relationship Between Mutual Complementation and Mutual Negation .............................. 147
6.7 Relations Between Flexible Linguistic Values ................................................................. 148
6.7.1 Order and Position ......................................... 148
6.7.2 Composition–Decomposition Relation and Category–Subordination Relation .................... 149
6.7.3 Inclusion Relation and Same-Level Relation .......................... 149
6.8 Similarity and Approximation About Flexible Linguistic Values ............................................. 150
6.8.1 Similarity and Approximation Relations Between Atom Flexible Linguistic Values and the Corresponding Measures .......................... 150
6.8.2 Similarity and Approximation Relations Between Composite Flexible Linguistic Values and the Corresponding Measures .......................... 154
6.9 Summary ........................................................ 158
Reference .................................................................. 159

7 Superposition, Quantification, Conversion, and Generalization of Flexible Linguistic Values ............. 161
7.1 Degree Linguistic Values and Superposed Linguistic Values .................................................... 161
7.2 Flexible Linguistic Value with Degree .............................................. 167
7.3 Interconversion Between Flexible Linguistic Values and Numerical Values ........................................... 169
  7.3.1 Interconversion Between Pure Flexible Linguistic Values and Numerical Values .................... 170
  7.3.2 Interconversion Between Flexible Linguistic Values with Degrees and Numerical Values ........ 174
  7.3.3 Interconversion Between Pure Flexible Linguistic Values and Flexible Linguistic Values with
        Degrees ......................................................... 177
7.4 Vector Flexible Linguistic Values and Flexible Linguistic-Valued Vectors ........................................ 178
7.5 Summary ............................................................................................................................................ 180
Reference ................................................................................................................................................... 181

8 Relatively Opposite Flexible Linguistic Values and Relatively Opposite Flexible Sets ......................... 183
  8.1 Relatively Opposite Flexible Linguistic Values and Their Types ..................................................... 183
  8.2 Relation Between Consistency-Degrees of Relatively Opposite Flexible Linguistic Values ......... 188
  8.3 Interchange Between Relatively Negative Relation and Relatively Opposite Relation ............... 192
  8.4 Relevant Theories About Flexible Linguistic Value with Opposite ................................................ 194
  8.5 Exclusive Flexible Partition of a Space and Exclusive Flexible Linguistic Values ....................... 197
  8.6 Relatively Opposite Flexible Sets and Flexible Set with Opposite ............................................... 202
  8.7 Summary ............................................................................................................................................ 203
Reference ................................................................................................................................................... 204

9 Correspondence Between Flexible Sets, and Flexible Linguistic Functions ........................................ 205
  9.1 Correspondence Between Flexible Sets ............................................................................................. 205
    9.1.1 Correspondence Between Two Sets ......................................................................................... 206
    9.1.2 Correspondence Between Two Flexible Sets ......................................................................... 208
    9.1.3 The Correspondence with a Compound Flexible Set .......................................................... 211
    9.1.4 Flexible Relations and Flexible-Set Correspondences ....................................................... 212
  9.2 Correspondence Between Flexible Linguistic Values ............................................................. 214
  9.3 Flexible Linguistic Functions ........................................................................................................... 215
    9.3.1 Definitions and Types of Flexible Linguistic Functions ....................................................... 215
    9.3.2 Representations of Flexible Linguistic Functions .............................................................. 218
