Contents

1 Introduction to Information Thermodynamics on Causal Networks ................................... 1
References ................................................................. 6

2 Review of Classical Information Theory ............ 11
2.1 Entropy ............................................................. 11
   2.1.1 Shannon Entropy ........................................... 11
   2.1.2 Relative Entropy ......................................... 13
   2.1.3 Mutual Information .................................... 15
   2.1.4 Transfer Entropy ....................................... 16
2.2 Noisy-Channel Coding Theorem ..................... 17
   2.2.1 Communication Channel ............................... 18
   2.2.2 Noisy-Channel Coding Theorem .................... 20
References ................................................................. 22

3 Stochastic Thermodynamics for Small System .... 25
3.1 Stochastic Thermodynamics .............................. 25
   3.1.1 Detailed Fluctuation Theorem ....................... 25
   3.1.2 Entropy Production .................................... 28
   3.1.3 Relative Entropy and the Second Law of Thermodynamics ............................................. 29
   3.1.4 Stochastic Relative Entropy and Integral Fluctuation Theorem .................................... 31
3.2 Steady State Thermodynamics and Feedback Cooling .............. 31
   3.2.1 Housekeeping Heat and Excess Heat ................ 32
   3.2.2 Stochastic Relative Entropy and Hatano–Sasa Identity ................................................ 33
   3.2.3 Stochastic Relative Entropy and Feedback Cooling ..................................................... 35
References ................................................................. 37
4 Information Thermodynamics Under Feedback Control 41
4.1 Feedback Control and Entropy Production 41
  4.1.1 Stochastic Relative Entropy and Sagawa–Ueda Relation 42
  4.1.2 Maxwell’s Demon Interpretation of Sagawa–Ueda Relation 44
4.2 Comparison Between Sagawa–Ueda Relation and the Second Law 46
  4.2.1 Total Entropy Production and Sagawa–Ueda Relation 46
References 48

5 Bayesian Networks and Causal Networks 51
  5.1 Bayesian Networks 51
    5.1.1 Directed Acyclic Graph 51
    5.1.2 Bayesian Networks 52
  5.2 Causal Networks 54
    5.2.1 Causal Networks 54
    5.2.2 Examples of Causal Networks 55
References 60

6 Information Thermodynamics on Causal Networks 61
  6.1 Entropy on Causal Networks 61
    6.1.1 Entropy Production on Causal Networks 61
    6.1.2 Examples of Entropy Production on Causal Networks 63
    6.1.3 Transfer Entropy on Causal Networks 66
    6.1.4 Initial and Final Correlations on Causal Networks 67
  6.2 Generalized Second Law on Causal Networks 68
    6.2.1 Relative Entropy and Generalized Second Law 68
    6.2.2 Examples of Generalized Second Law on Causal Networks 70
    6.2.3 Coupled Chemical Reaction Model with Time-Delayed Feedback Loop 75
References 82

7 Application to Biochemical Signal Transduction 83
  7.1 Biochemical Signal Transduction 83
    7.1.1 Sensory Adaptation 84
    7.1.2 Mutual Information in Biochemical Signal Transduction 84
  7.2 Information Thermodynamics in Biochemical Signal Transduction 85
    7.2.1 Coupled Langevin Model of Sensory Adaptation 86
    7.2.2 Information Thermodynamics and Robustness of Adaptation 87
7.2.3 Information Thermodynamics and Conventional Thermodynamics ..................................... 89
7.2.4 Analytical Calculations ................................................................. 90
7.3 Information Thermodynamics and Noisy-Channel Coding Theorem ........................................ 95
   7.3.1 Analogical Similarity ...................................................................... 95
   7.3.2 Difference and Biochemical Relevance ....................................... 95
References ............................................................................................................. 97

8 Information Thermodynamics as Stochastic Thermodynamics for Small Subsystem .................................. 99
   8.1 Information Thermodynamics for Small Subsystem ....................... 99
       8.1.1 Information Thermodynamics for a Multi-dimensional Markov Process ........................................ 99
       8.1.2 Transfer Entropy for Multi-dimensional Linear Langevin System .................................................... 102
       8.1.3 Relative Entropy and Integral Fluctuation Theorem for Small Subsystem .......................................... 104
       8.1.4 Stochastic Energetics for Small Subsystem .................................... 107
   8.2 Further Generalizations ................................................................. 108
       8.2.1 Generalization for Fokker–Planck Equation ......................... 108
       8.2.2 Backward Transfer Entropy and Final Correlation .............. 110
       8.2.3 Further Generalization: Information Thermodynamics on Causal Networks Including Backward Transfer Entropy .................................................. 113
       8.2.4 Examples of Generalized Second Law Including Backward Transfer Entropy ..................................... 116
References ............................................................................................................. 119

9 Further Applications of Information Thermodynamics on Causal Networks ........................................ 121
   9.1 Steady State Information Thermodynamics ................................. 122
   9.2 Feedback Cooling and Third Law of Thermodynamics .................. 124
References ............................................................................................................. 126

10 Conclusions ....................................................................................................... 127
    References ........................................................................................................ 129
