1	Introduction	1
2	China's Energy System	5
2.1	Energy Allocation Sankey Diagrams	5
2.1.1	Total Energy Flows.	6
2.1.2	Coal, Oil, and Natural Gas Flows.	8
2.2	The Key Influencing Factors on China's Energy System.	9
2.2.1	Economic Growth and Energy Demand.	9
2.2.2	China's Energy Resources and Supply Structure.	11
2.2.3	China's Environmental Challenges	12
2.2.4	China's Approach to Strategic Planning of Energy	13
2.3	China's Regional Differences.	15
	References	16
3	Long-Term Forecasting of Macro-Energy Scenarios of China	19
3.1	Introduction	20
3.2	Methodology Descriptions	22
3.2.1	IEA's World Energy Outlook 2010.	22
3.2.2	EIA's International Energy Outlook 2010	23
3.2.3	BP's Energy Outlook 2030.	24
3.2.4	CAE's Mid-Term and Long-Term Energy Development Strategy of China (2030, 2050)	25
3.3	Policy Assumptions	25
3.4	Technical Accuracy	25
3.5	Criteria of Scenario Settings.	28
3.6	Challenges of Projections and Our Motivations.	30
4	China's Fossil Fuel Resources.	35
4.1	Overview	35
4.1.1	Coal	35
4.1.2	Gas	38
4.1.3	Oil.	40
4.1.4	Future Fossil Energy Development Trend	42

- 4.2 Unconventional Gas—Challenges for This Untapped Resource . . . 43
 - 4.2.1 Definition and Classification 43
 - 4.2.2 Development Status 44
 - 4.2.3 Development Barriers. 45
 - 4.2.4 Recommendations 47
- 4.3 Conclusions 49
- References 49
- 5 Overcapacity Challenges. 51**
 - 5.1 Introduction 51
 - 5.2 Concepts and Reasons for Overcapacity 52
 - 5.3 Regional Analysis: Significant Disparities in Energy Consumption Patterns. 55
 - 5.4 Refining and Transport Fuel Sector—Meeting Cleaner Fuel Needs 57
 - 5.5 Regional Model for Technology Optimisation of Power Generation Sector. 59
 - 5.6 Conclusion 61
 - References 62
- 6 Role of State-of-the-Art Technology. 63**
 - 6.1 Current Status of Power Technologies 63
 - 6.1.1 Pulverised Coal (PC) 63
 - 6.1.2 Gas Power. 67
 - 6.1.3 Nuclear 69
 - 6.1.4 Renewable Power. 70
 - 6.1.5 Remarks 75
 - 6.2 Future Potential of Power Technologies. 75
 - 6.2.1 PC Trends. 77
 - 6.2.2 Gas Power Trends. 77
 - 6.2.3 Nuclear 77
 - 6.2.4 Renewable Power. 78
 - 6.3 Conclusions 79
 - References 79
- 7 Modelling China’s Future Energy Infrastructure: An Introduction to the Modelling Methodology 81**
 - 7.1 Introduction 81
 - 7.2 Methodology Description. 81
 - 7.2.1 Power Model Structure and Assumptions 81
 - 7.2.2 Mathematical Equations. 83
 - 7.2.3 Constraints and Conditions 86
- 8 China’s Future Power Infrastructure 89**
 - 8.1 Introduction 89
 - 8.2 Modelling Process for China’s Power Infrastructure 90

8.2.1	Data	90
8.2.2	Model Solving	91
8.3	Results and Insights into the Development of China's Power Sector.	91
8.3.1	Power Generation Costs and Mix Outlook.	91
8.3.2	NGCC, NU, HD, WD, BM, and PV.	91
8.3.3	PC, PCC, IGCC, and IGCCC.	93
8.3.4	Sensitivity Analysis	94
8.3.5	Regional Power Generation Mix and Inter-region Power Transmission	95
8.4	Modelling Temporal Variations of Power Demand and Generation	98
8.4.1	Introduction	98
8.4.2	Objective Equations and Constrains.	100
8.4.3	Data	102
8.4.4	Results and Discussions	105
8.4.5	Summary of Impacts of Temporal Demand on Power Sector Planning	109
	Appendix A: Nomenclature	110
	Appendix B: Parameters	113

10.2	Current MSW Processing Technologies.	131
10.3	Modelling of MSW Disposal Option	131
10.3.1	Model and Results	131
10.3.2	Sensitivity Analysis and Policy Uncertainties	134
10.3.3	MSW Disposal Subsidy	134
10.3.4	Methane Emission Tax	135
10.3.5	Kitchen Waste Classification	135
10.3.6	Challenges for Incineration	137
10.4	Conclusion for the Development of MSW Disposal Sector.	137
10.5	Update on the Policy Status of CCS.	139

- 10.5.1 Introduction 139
- 10.5.2 Why CCS Is Relevant. 139
- 10.5.3 Policy Status. 141
- 10.5.4 Carbon Trading Pilots. 141
- 10.6 Technology and Demonstration Projects 142
 - 10.6.1 Importance of CCS as a Technology for China 142
 - 10.6.2 Technology Status in China 142
- 10.7 Conclusion and Suggestion 144
 - 10.7.1 Future Hurdles 144
 - 10.7.2 Future Opportunities 145
 - 10.7.3 Conclusion for the Role of CCS. 145
- References 146
- 11 Conclusions.** 147
