Contents

1 Basic Models of Computational Mass Transfer .................. 1
  1.1 Equation of Mass Conservation and Its Closure .......... 3
  1.2 Turbulent Mass Diffusivity Model ........................ 6
  1.3 Conventional Turbulent Mass Diffusivity Model ............ 6
    1.3.1 Turbulent Schmidt Number Model ............... 6
    1.3.2 Inert Tracer Model ........................... 7
  1.4 $\bar{c}^2 - \bar{e}$ Model (Two-Equation Model) ............ 7
    1.4.1 The $\bar{c}^2$ and $\bar{e}$ Equations ............. 8
    1.4.2 The $\bar{c}^2 - \bar{e}$ Model Equation Sets .......... 17
    1.4.3 Determination of Boundary Conditions ............ 21
    1.4.4 Experimental Verification of Model Prediction ....... 24
    1.4.5 Analogy Between Transport Diffusivities ............ 26
    1.4.6 Generalized Equations of Two-Equation Model ....... 28
  1.5 Reynolds Mass Flux Model ................................ 29
    1.5.1 Standard Reynolds Mass Flux Model ............. 29
    1.5.2 Hybrid Reynolds Mass Flux Model ................ 37
    1.5.3 Algebraic Reynolds Mass Flux Model .............. 38
  1.6 Simulation of Gas (Vapor)–Liquid Two-Phase Flow ........ 39
  1.7 Model System of CMT Process Computation ................. 45
  1.8 Summary ........................................ 46

References ............................................. 47

2 Application of Computational Mass Transfer (I) Distillation
  Process ............................................... 51
  2.1 Tray Column ...................................... 54
    2.1.1 $\bar{c}^2 - \bar{e}$ Two-Equation Model ............... 54
    2.1.2 Reynolds Mass Flux Model ........................ 69
    2.1.3 Prediction of Multicomponent Point Efficiency ...... 78
2.2 Packed Column ...................................... 90
   2.2.1 $\varepsilon^2 - \varepsilon_c$ Two-Equation Model ............... 90
   2.2.2 Reynolds Mass Flux Model ........................ 95
2.3 Separation of Benzene and Thiophene by Extractive Distillation ........................................... 103
2.4 Summary .......................................... 108
References ............................................... 109

3 Application of Computational Mass Transfer (II) Chemical Absorption Process ....................................... 111
   3.1 $\varepsilon^2 - \varepsilon_c$ Two-Equation Model ....................... 113
       3.1.1 Absorption of CO$_2$ by Aqueous MEA in Packed Column ........................................... 118
       3.1.2 Absorption of CO$_2$ by Aqueous AMP in Packed Column ........................................... 125
       3.1.3 Absorption of CO$_2$ by Aqueous NaOH in Packed Column ........................................... 128
   3.2 Reynolds Mass Flux Model ............................. 134
       3.2.1 Absorption of CO$_2$ by Aqueous MEA in Packed Column ........................................... 137
       3.2.2 The Absorption of CO$_2$ by Aqueous NaOH in Packed Column ........................................... 144
   3.3 Summary .......................................... 148
References ............................................... 148

4 Application of Computational Mass Transfer (III)—Adsorption Process ................................................. 151
   4.1 $\varepsilon^2 - \varepsilon_c$ Two-Equation Model for Gas Adsorption ............... 154
       4.1.1 $\varepsilon^2 - \varepsilon_c$ Model Equations ....................... 154
       4.1.2 Boundary Conditions ..................................... 157
       4.1.3 Evaluation of Source Terms ........................... 158
       4.1.4 Simulated Results and Verification ..................... 160
       4.1.5 Simulation for Desorption (Regeneration) and Verification ........................................... 165
   4.2 Reynolds Mass Flux Model ............................. 167
       4.2.1 Model Equations ..................................... 167
       4.2.2 Simulated Results and Verification ..................... 169
       4.2.3 Simulation for Desorption (Regeneration) and Verification ........................................... 171
   4.3 Summary .......................................... 173
References ............................................... 173
5 Application of Computational Mass Transfer (IV)  
Fixed-Bed Catalytic Reaction ........................................... 175
  5.1 $\varepsilon^2 - \varepsilon_c$ Two-Equation Model for Catalytic Reactor ...... 178
    5.1.1 Model Equation .................................................................. 178
    5.1.2 Boundary Conditions .......................................................... 182
    5.1.3 Determination of the Source Terms ....................................... 182
    5.1.4 The Simulated Wall-Cooled Catalytic Reactor .................. 183
    5.1.5 Simulated Result and Verification ......................................... 185
  5.2 Reynolds Mass Flux Model for Catalytic Reactor ................. 191
    5.2.1 Model Equations .................................................................. 191
    5.2.2 Simulated Result and Verification ......................................... 194
    5.2.3 The Anisotropic Mass Diffusivity ......................................... 197
  5.3 Summary .................................................................................. 200
References .............................................................................. 201

6 Application of Computational Mass Transfer (V) Fluidized  
Chemical Process .............................................................. 203
  6.1 Flow Characteristics of Fluidized Bed ..................................... 205
  6.2 $\varepsilon^2 - \varepsilon_c$ Two-Equation Model for Simulating Fluidized  
    Process .................................................................................. 208
    6.2.1 The Removal of CO$_2$ in Flue Gas in FFB Reactor .............. 208
    6.2.2 Simulation of Ozone Decomposition in the Downer  
        of CFB Reactor .................................................................. 219
  6.3 Reynolds Mass Flux Model for Simulating Fluidized  
    Process .................................................................................. 223
    6.3.1 Model Equations ................................................................ 223
    6.3.2 Simulation of the Riser in CFB Ozone  
        Decomposition .................................................................... 227
    6.3.3 Simulation of the Downer in CFB Ozone  
        Decomposition .................................................................... 237
  6.4 Summary .................................................................................. 239
References .............................................................................. 240

7 Mass Transfer in Multicomponent Systems ......................... 243
  7.1 Mass Transfer Rate in Two-Component (Binary) System .......... 245
  7.2 Mass Transfer in Multicomponent System ............................ 251
    7.2.1 Generalized Fick’s Law ....................................................... 252
    7.2.2 Maxwell–Stefan Equation .................................................... 252
  7.3 Application of Multicomponent Mass Transfer Equation ........ 256
    7.3.1 Prediction of Point Efficiency of Tray Column ................. 256
    7.3.2 Two-Regime Model for Point Efficiency  
        Simulation ........................................................................ 257
    7.3.3 Example of Simulation ....................................................... 261
