# Contents

Optically Active Polymers: A Systematic Study on Syntheses and Properties ................................................. 1

1 Introduction .................................................................................................................. 1

2 Synthesis of Optically Active Polymers ................................................................. 2
   2.1 Helical Polymer ....................................................................................................... 2
   2.2 Poly (ethyl \(\alpha\)-lysineimide)s .......................................................................... 4
   2.3 Poly (ethyl \(\alpha\)-lysineamide)s ........................................................................... 4
   2.4 Optically Active Poly(amide–imide)s ................................................................. 4
   2.5 Poly(phenylacetylene) ....................................................................................... 9
   2.6 Optically Active Dendronized Polymers ............................................................. 9
   2.7 Optically Active Poly(ester-imide)s [33] ........................................................... 10
   2.8 Optically Active Polyalkylthiophenes [34–37] .................................................. 10
   2.9 Synthesis of Optically Active Azoaromatic and Carbazole Containing Azoaromatic Polymers and Copolymers ......... 14
   2.10 Synthesis of Optically Active Benzodithiophene Based Poly(aryleneethynylene)s for Solar Cells [71] ............... 21
   2.11 Synthesis of Optically Active Porphyrin Derivatives Bearing Four Chiral Citronellal Moieties ......................... 25
   2.12 Asymmetric Polymerizations of \(N\)-Substituted Maleimides Bearing \(\alpha\)-Leucine Ester Derivatives .................. 26

3 Characterization Techniques for Analyzing the Optical Activities of Polymers ....................................................... 29

4 Properties .................................................................................................................... 31
   4.1 Nonlinear Optical Properties of Azo-Polymers ............................................... 31
   4.2 Thermal Analysis ................................................................................................. 34
   4.3 Chirotical Properties .......................................................................................... 35
   4.4 Vapochromic Behaviour ................................................................................... 35
   4.5 Absorption and Emission Properties .................................................................. 36
   4.6 Thermosensitivity ............................................................................................... 37
Optically Active Polymers
A Systematic Study on Syntheses and Properties
Dutta, P.K.; Kumar, V.
2017, XIX, 47 p. 12 illus., Softcover
ISBN: 978-981-10-2605-8
