Contents

1 General Introduction .............................................. 1
  1.1 Transition Metals ........................................... 1
  1.2 Low Oxidation State Transition Metal Complexes .......... 2
    1.2.1 Bulky Ligands Used into Stabilise Low Oxidation
          State Complexes ....................................... 2
    1.2.2 Preparation of Low Oxidation State Transition
          Metal Complexes ......................................... 3
  1.3 Metal–Metal Bonding in Transition Metal Complexes ....... 4
    1.3.1 History ................................................ 4
    1.3.2 Quintuple Bonds ....................................... 5
  1.4 Magnesium(I) Complexes .................................... 7
    1.4.1 Reactivity of β-Diketiminate Stabilised Magnesium(I)
          Complexes ................................................. 8
    1.4.2 Using β-Diketiminate Stabilised Magnesium(I)
          Complexes as Reducing Agents in Inorganic Synthesis ... 9
References .......................................................... 12

2 Extremely Bulky Amido d-Block Metal(II) Halide Complexes .. 15
  2.1 Introduction .................................................. 15
    2.1.1 Previously Reported Bulky Amido Transition Metal(II)
          Halide Complexes ......................................... 16
    2.1.2 Previously Reported Bulky Amido Group 12 Metal(II)
          Halide Complexes ......................................... 18
    2.1.3 Terphenyl Stabilised D-Block Metal Halide Complexes ... 20
    2.1.4 Extremely Bulky Monodentate Amido Ligands .......... 25
  2.2 Research Outline .............................................. 27
  2.3 Results and Discussion ...................................... 28
    2.3.1 Preparation of Bulky Potassium Amide Salts .......... 28
    2.3.2 Bulky Amido First Row Transition Metal(II)
          Halide Complexes ......................................... 29
    2.3.3 Bulky Amido Group 12 Metal(II) Halide Complexes .... 36
3 Preparation of Low Oxidation State Manganese Complexes Stabilised by Bulky Amide Ligands

3.1 Introduction

3.1.1 Low Oxidation State Manganese Complexes

3.2 Research Outline

3.3 Results and Discussion

3.3.1 Preparation and Characterisation of a Two-Coordinate Manganese(I) Dimer with an Unsupported Metal–Metal Bond

3.3.2 Preparation and Characterisation of a Two-Coordinate Manganese(0) Heterobimetallic Complex with an Unsupported Mn–Mg Bond

3.3.3 Reactivity of a Two-Coordinate Manganese(0) Heterobimetallic Complex

3.4 Conclusion

3.5 Experimental

References

4 Preparation of Low Oxidation State Group 12 Metal Complexes Stabilised by Bulky Amide Ligands

4.1 Introduction

4.1.1 The First Molecular Compounds Possessing Group 12 Metal–Metal Bonds

4.1.2 Isolation of the First Zinc(I) Dimer

4.1.3 Other Metal–Metal Bonded Zinc(I) Compounds

4.2 Research Outline

4.3 Results and Discussion

4.3.1 Preparation and Characterisation of a Homologous Series of Group 12 Metal(I) Dimers

4.3.2 Preparation and Characterisation of a Two-Coordinate Zinc(0) Heterobimetallic Complex with an Unsupported Zn–Mg Bond

4.3.3 Attempts to Synthesise Two-Coordinate Cadmium(0) or Mercury(0) Heterobimetallic Complexes with Unsupported M–Mg Bonds

4.3.4 Reactivity of a Two-Coordinate Zinc(0) Heterobimetallic Complex with an Unsupported Zn–Mg Bond

4.4 Conclusion

4.5 Experimental
