

Contents

1 Speaker Recognition: Introduction	1
1.1 Basic Concepts	2
1.2 Development History	3
1.3 System Framework	8
1.4 Categories	8
1.4.1 Identification, Verification, Detection, and Tracking	8
1.4.2 Text-Dependent, Text-Independent and Text-Prompted	9
1.5 Performance Evaluations	10
1.5.1 Evaluation Metrics for Verification or Open-Set Identification	10
1.5.2 Evaluation Metrics for Close-Set Identification	12
References	13
2 Environment-Related Robustness Issues	15
2.1 Background Noise	15
2.1.1 Speech Enhancement	15
2.1.2 Feature Compensation	16
2.1.3 Robust Modeling	16
2.1.4 Score Normalization	17
2.2 Channel Mismatch	17
2.2.1 Feature Transformation	18
2.2.2 Channel Compensation	18
2.2.3 Score Normalization	20
2.3 Multiple Speakers	20
2.3.1 Robust Features	21
2.3.2 Robust Speaker Models	21
2.3.3 Segmentation and Clustering Algorithms	22
2.4 Discussions	23
References	23

3	Speaker-Related Robustness Issues	27
3.1	Genders	27
3.2	Physical Conditions	28
3.3	Speaking Styles	28
3.3.1	Emotion	28
3.3.2	Speaking Rate	29
3.3.3	Idiom	30
3.4	Cross Languages	30
3.5	Time Varying	32
3.6	Discussion	34
	References	34
4	Application-Oriented Robustness Issues	39
4.1	Application Scenarios	39
4.1.1	User Authentication	39
4.1.2	Public Security and Judicature	39
4.1.3	Speaker Adaptation in Speech Recognition	40
4.1.4	Multi-speaker Environments	40
4.1.5	Personalization	40
4.2	Short Utterance	40
4.3	Anti-spoofing	42
4.3.1	Impersonation	42
4.3.2	Speech Synthesis	43
4.3.3	Voice Conversion	43
4.3.4	Replay	44
4.3.5	Voice Liveness Detection	45
4.4	Cross Encoding Schemes	46
4.5	Discussion	46
	References	46
5	Conclusions and Future Work	49
