

Contents

1	Some Analytical and Numerical Methods in the Theory of Wave Propagation and Diffraction	1
1.1	Method of Separation of Variables	1
1.2	Method of Power Series	3
1.3	Method of Spline Functions	7
1.4	Method of an Auxiliary Boundary	9
1.5	Some Algorithms for the Numerical Inversion of the Laplace Transform	10
1.5.1	Shifted Legendre Polynomials	11
1.5.2	Fourier Sine Series	13
1.5.3	Exponential Functions	16
1.5.4	Power Series Combined with Numerical Inversion	16
1.5.5	Fourier–Bessel Series	17
1.6	Method of Multiple Scales	19
	References	20
2	Spectral Methods in the Theory of Wave Propagation	25
2.1	Equations of Motion of an Ideal Fluid. Small-Amplitude Waves	25
2.1.1	Euler and Laplace Equations with Boundary Conditions	25
2.1.2	Stationary Fluid Motion	27
2.1.3	Wave Energy, Momentum and Power	29
2.1.4	General Solution of the Laplace Equation	31
2.1.5	Small-Amplitude Waves (Linear Approximation)	32
2.1.6	Dimensionless Equations and Parameters	35
2.1.7	Complex Potential	37
2.2	Stokes Waves and Methods of Their Calculation	42
2.2.1	Stokes Waves	42
2.2.2	Steep Stokes Waves and Their Main Properties	43
2.2.3	Spectral Methods of Calculating the Stokes Waves	47

2.3	The Limiting Stokes Wave with a Corner at the Crest and Its Calculation	50
2.4	High-Order Nonlinear Schrödinger Equation and Split-Step Fourier Technique.	57
2.5	Two-parameter Method for Describing the Nonlinear Evolution of Narrow-Band Wave Trains.	64
	References.	71
3	Ray Method of Investigating the Wave Evolution over Arbitrary Topography	77
3.1	On the Geometric Theory of Water Wave Refraction.	77
3.2	Wave Refraction over Inhomogeneous Bottom.	80
3.2.1	Equations of the Ray Method	81
3.2.2	Ray Separation Factor	83
3.2.3	Wave Amplitude.	87
3.2.4	Specifying the Bottom Relief in Analytical Form. The Case of Linear Depth Variation	88
3.2.5	The Case of Parabolic Depth Variation.	90
3.2.6	The Case of Hyperbolic Depth Variation	91
3.2.7	Specifying the Fluid Depth in Tabular Form.	93
3.2.8	Comparing the Theoretical Results and Field Observations	94
3.2.9	Wave Transformation in the Zones of Caustics.	98
3.3	Nonlinear Theory of Wave Refraction in a Fluid with Variable Depth	100
	References.	109
4	Analytical and Numerical Solutions to the Wave Diffraction Problems	113
4.1	On the Formulation and Solution of Wave-Diffraction Problems.	113
4.2	Wave Diffraction by a Partially Submerged Elliptical Cylinder	116
4.3	Wave Diffraction by a Submerged Circular Cylinder	125
4.4	Scattering of Magnetoacoustic Cylindrical Waves by a Cylinder	129
4.5	Wave Diffraction by a System of Cylinders	135
4.6	Wave Scattering by an Asymmetrically Inhomogeneous Cylinder	142
4.7	Numerical-Analytical Method of an Auxiliary Boundary for Studying the Wave Diffraction by a Vertical Obstacle	148
4.8	Numerical Study of the Acoustic Wave Diffraction by a Body of Revolution	152
4.8.1	Symmetric Inhomogeneities	152
4.8.2	Asymmetric Inhomogeneities	155
	References.	158
