Contents

1 Mineral Resources and Exploration .................................. 1
  1.1 Concept of Mineral Exploration .................................. 1
  1.2 Accessible and Available Resource and Reserves ................. 3
  1.3 Estimation of Undiscovered Resources .......................... 4
  1.4 Economic—Definition of Exploration ............................ 5
  1.5 Geological Cycles and the Formation of Mineral Deposits ...... 8
  1.6 Project Effectiveness and Success Ratio ....................... 12
  Further Readings ............................................ 15

2 Composition of the Earth and Mineral Resources .................... 17
  2.1 Crust of the Earth ........................................ 17
     2.1.1 Common Rock Forming Minerals ........................ 18
     2.1.2 Physical Characteristics of Minerals .................. 19
     2.1.3 Importance of Mineralogical Characteristics .......... 24
     2.1.4 Mineralogical Identification ........................ 25
  2.2 Formation of Rocks and Mineral Deposits .................... 27
     2.2.1 Igneous Rocks .................................... 27
     2.2.2 Sedimentary Rocks ................................ 32
     2.2.3 Metamorphic Rocks ................................ 34
  2.3 Other Ore-Forming Processes and the Resultant Mineral Deposits ............................................. 37
     2.3.1 Guide to Locate Oxidation Enrichment Ores ............ 39
  2.4 Geological Structures .................................... 41
     2.4.1 Structure of Igneous Rocks .......................... 41
     2.4.2 Structures of Sedimentary Rocks ...................... 42
     2.4.3 Structures of Metamorphic Rocks ..................... 43
     2.4.4 Other Structures .................................. 43
  Further Readings ............................................ 58
3 The Search for Ore Deposits and Chances of Success
3.1 Geological Models and Methods of Exploration
3.1.1 Efficiency of the Method in Exploration
3.2 Exploration Procedure
3.2.1 Preliminary Exploration
3.2.2 Detailed Exploration
3.3 Types of Deposits and Exploration
3.4 Exploration Norms
3.5 Analyzing Exploration Data
3.6 Economics of Exploration and Mining
3.7 Organization and Methods in Mineral Exploration
3.8 Recruitment and Deployment of Personnel
3.9 Procurement of Equipment Needed in Mineral Exploration
3.10 Methods in Exploration
3.11 Developmental Phase in Exploration
3.12 Ground Exploration Methods
3.12.1 Regional Geological Mapping
3.12.2 Geological Mapping by Compass and Tape/Pacing
3.13 Geophysical Methods
3.14 Nuclear Methods
3.15 Geochemical Mapping and Sampling
3.16 Other Field Procedures
3.17 Drilling
3.18 Sampling
3.18.1 Principles
3.18.2 Types of Sampling
3.18.3 Criteria for the Selection of a Sampling Procedure for a Particular Mineral Type
3.18.4 Spacing of Sample Channels
3.18.5 Collection of Samples
Further Reading

4 Remote Sensing in Mineral Exploration
4.1 Concept
4.2 Remote Sensing System
4.2.1 Remote Sensing Sensors
4.2.2 EM Spectrum
4.2.3 Spectral Characteristics of Hydrothermal Alteration Minerals
4.3 Discrete or Digital Image Processing of Satellite/Airborne Images
4.3.1 Image Registration
4.3.2 Image Enhancement
4.3.3 Contrast Stretching
4.3.4 Band Rationing ................................ 131
4.3.5 Addition and Subtraction .......................... 132
4.3.6 Principal Component Analysis (PCA) .............. 133
4.3.7 Red-Green-Blue (RGB) Coding ................... 133
4.3.8 Spectral Angle Mapper (SAM) .................... 133
4.3.9 Image Filtering ................................ 134

4.4 Application of Remote Sensing in Mineral Exploration .......... 135
4.4.1 Geological Structures .................. 136
4.4.2 Hydrothermal Alteration Mapping .................. 138
4.4.3 Application of Remote Sensing in Bauxite and Carbonate Exploration .......................... 146
4.4.4 Application of Remote Sensing in Exploration of Placer Deposits .................. 147
4.4.5 Application of Remote Sensing for Iron Ore Exploration ............ 148
4.4.6 Remote Sensing Application for Chromite Exploration ............ 149

Further Readings ........................................... 151

5 Survey in Exploration .................................................. 155
5.1 Aims and Objectives of Surveying in Exploration ......... 155
5.2 Methods of Surveying ........................................ 156
5.2.1 Triangulation ........................................ 157
5.2.2 Traversing ....................................... 159
5.2.3 Levelling ......................................... 160
5.2.4 Contouring ....................................... 163
5.2.5 Tacheometry ...................................... 163
5.2.6 Plane Tabling ..................................... 163
5.2.7 Chain or Linear Surveying ...................... 166
5.2.8 Traversing with Compass ....................... 166
5.3 Differential Global Positioning System (DGPS) .............. 167
5.3.1 DGPS Basic Concepts .......................... 168
5.3.2 Purpose of the DGPS Survey .................... 168
5.3.3 Instrument and Technical Specification ............. 168
5.3.4 DGPS Survey Steps ............................ 169
5.3.5 DGPS Point Selection Criteria ................. 169
5.4 Underground Surveys .................................. 171
5.5 Equipment and Norms of Surveying ....................... 173

Further Readings ........................................... 175

6 The Statistical Treatment of Exploration Data and Computer Application ......................... 177
6.1 Introduction ........................................... 177
6.2 Statistical Methods and Applications ......................................... 178
6.3 Determining the Number If Sample of Specific Precision Levels of Estimate and Computing the Number of Exploratory Opening in Mineral Exploration ........................................ 181
   6.3.1 Calculation of the Distance Between Two Exploratory Openings (Boreholes/Pits/Trench) ................................................................. 183
   6.3.2 Calculating the Number of Exploratory Openings .................. 184
   6.3.3 Calculation of Sample Value ............................................. 185
   6.3.4 Regression and Correlation ............................................. 185
   6.3.5 Coefficient of Correlation ............................................. 188
   6.3.6 Use of Lognormal Distributions ..................................... 188
6.4 Geostatistical Methods and Their Applications ................................. 189
   6.4.1 The De Wijsian Model ............................................. 190
   6.4.2 Extension Geovariance ............................................. 191
   6.4.3 The Transitive Model ............................................. 192
   6.4.4 Krigging and Its Application in Grade Estimation ............... 194
Further Readings .................................................................................. 195

7 Interpretation of Exploration Data ............................................. 197
7.1 Interpretation and Evaluation .................................................. 197
   7.1.1 Structure Contour Plans ............................................. 198
   7.1.2 Isopach (Isochore) Map ............................................. 198
   7.1.3 Isograd Plan ......................................................... 198
   7.1.4 Assay Plans ......................................................... 198
   7.1.5 Ore Distribution Plan ............................................. 199
   7.1.6 Cross Section ....................................................... 199
   7.1.7 Longitudinal Vertical Projection .................................. 199
   7.1.8 Isometric Projection ............................................. 200
   7.1.9 Slice Plan ......................................................... 200
7.2 Computation and Quantitative Assessment of Mineral Potential ............... 200
   7.2.1 Method of Reserve Computation .................................. 204
   7.2.2 Criteria for Selecting a Reserve Computation Method and Classifications of Resources ................................................................. 211
   7.2.3 Grade Computation ............................................. 214
Further Readings .................................................................................. 216

8 How to Arrive at a Decision to Open a Mine? ........................................... 217
8.1 Exploration of Mineral Deposits: Field Guides and Preliminary Observations ................................................................. 217
8.2 Important Mineral Deposits and Exploration .................................... 220
   8.2.1 Mineral Deposits Associated with Ultramafic and Mafic Igneous Rocks ................................................................. 220
   8.2.2 Mineral Deposits Associated with Igneous Intermediate Rocks ................................................................. 229
Mineral Exploration: Practical Application
Roonwal, G.S.
2018, XIV, 298 p. 43 illus., Hardcover
