Contents

1 Turning the Tide in the Construction Industry: From Traditional Construction Safety Measures to an Innovative Automated Approach .............................................................. 1
   1 Introduction ........................................................................................................ 1
   2 Traditional Construction Safety Measures ......................................................... 3
      3.1 Building Information Modelling ................................................................. 11
      3.2 Additive Manufacturing ............................................................................ 12
      3.3 Virtual Reality (VR) ................................................................................. 13
      3.4 Internet of Things (IoT) ........................................................................... 13
      3.5 Robots ........................................................................................................ 13
      3.6 Software Engineering for Construction Safety ........................................... 14
   4 Major Hurdles in Moving from Manual Work to an Automated Construction Approach ...................................................................................................................... 14
      4.1 Economic Costs .......................................................................................... 14
      4.2 Institutions and Technological Change ....................................................... 15
   5 Should We Adopt the New Technologies? A Cost Benefit Analysis (CBA) Approach .............................................................................................................................. 15
   6 Objectives, Hypothesis and Research Methods .................................................. 16
   7 Conclusion ......................................................................................................... 16
   References ............................................................................................................ 16

2 Robots for the Construction Industry ................................................................ 23
   1 Introduction: A General Overview on Robots ................................................... 23
   2 Popularity in Robots, Robotic Arms and Wearable Robotic Searches as Reflected in Google Searches: A Big Data Analysis from 2004 to the Present ........................................ 25
   3 Information Flow Between Robot and Human ................................................... 26
   4 Robotics Application in the Construction Industry .......................................... 28
3 Building Information Modelling and Construction Safety  

4 Addictive Manufacturing, Prosumption and Construction Safety
5 Software Engineering and Reducing Construction Fatalities: 
An Example of the Use of Chatbot .......................... 105
1 Construction Fatalities ..................................... 105
2 The Role of Software Engineering in On-site Construction Safety ................................................. 107
3 Software and Algorithms that Help Improve Construction Safety Performance on Sites ............... 107
   3.1 Geographical Information Systems (GIS) ............... 107
   3.2 Smart Helmets System .................................. 108
   3.3 Virtual Reality and Augmented Reality ................. 108
6 Virtual Reality and Construction Safety ........................................ 117
  1 Introduction .............................................................................. 117
  2 Virtual Reality ......................................................................... 118
  3 Popularity of VR as Reflected in the Number of Google
     Searches: Big Data Analysis .................................................. 120
  4 VR Applications ....................................................................... 121
     4.1 Gaming Industry ............................................................... 121
     4.2 Driving Simulations ......................................................... 122
     4.3 Shopping Mall Promotions .............................................. 123
     4.4 VR Application in Teaching and Learning: An Example
          of Edutainment .............................................................. 123
     4.5 VR Application in Construction Industry ......................... 124
  5 Cost–Benefit Analysis of VR Application in Construction
     Industry ................................................................................... 126
     5.1 Costs of VR ....................................................................... 126
     5.2 Benefits of Adopting VR ................................................... 127
  6 Mixed Research Method ............................................................. 129
  7 Construction Practitioners’ Viewpoints on Virtual Reality ......... 129
     7.1 Benefits of VR in Construction Safety .................................. 129
     7.2 Costs .................................................................................. 130
     7.3 “I Do not Know What It Is” Is the Major Hang-up in
          Adopting VR On-site .......................................................... 131
  8 Case Studies ............................................................................. 132
     8.1 Case Study One: VR Application in Safety Training
          in Hong Kong ....................................................................... 132
     8.2 Case Study Two: VR Application in Planning Stage
          in Seattle, United States ..................................................... 133
  9 Conclusion .................................................................................. 134
References .................................................................................... 135

7 Smart Working Environments Using the Internet of Things
   and Construction Site Safety ....................................................... 137
  1 Introduction .............................................................................. 137
  2 Internet of Things (IoT) and Smart Object Interactions ............ 139
