1 Overview of Topological Ideas in Condensed Matter Physics 1
   By Siddhartha Sen

1.1 Introduction 1
1.2 Manifolds 5
1.3 Differential Forms 7
   1.3.1 Examples 9
1.4 Vector fields 9
1.5 The exterior derivative (d) 11
1.6 A brief discussion on de Rham cohomology 12
1.7 Betti numbers 13
1.8 Homotopy and Cohomology Groups 14
1.9 Fibre Bundles and Vector Bundles 18
1.10 Groups and their manifolds 20
   1.10.1 U(1) 20
   1.10.2 SU(2) 21
   1.10.3 SO(3) 21
1.11 Conclusion 21
I Topological Tools

2 Set Topology 25
   By Somnath Basu and Atreyee Bhattacharya
   I Topology: A Quick Review 25
      2.1 Equivalence relation 25
      2.2 From metric spaces to topology 26
      2.3 Topological spaces: Definition and examples 28
      2.4 Topological spaces: Some key properties 30
      2.5 Quotient topology 32
      2.6 Topological manifolds 35
   II A Tutorial on Equivalence Relations and Quotient Sets 38

3 Homotopy theory 45
   By Samik Basu and Soma Maity
   I The Fundamental Group 45
      3.1 Introduction 45
      3.2 Paths and loops in a topological space 46
      3.3 Operations on paths and loops 48
      3.4 The fundamental group 51
   II Higher Homotopy Groups 57
      3.5 Definition of homotopy groups 57
      3.6 Computing homotopy groups 59
   III A Tutorial on Fundamental groups and group actions 61
      3.7 Fundamental groups of Spheres 61
      3.8 Fundamental group of Real Projective spaces 62
      3.9 Group actions 62

4 Homology 65
   By Dheeraj Kulkarni
   4.1 Introduction 65
   4.2 Motivating Examples 66
   4.3 Simplicial Complex 66
   4.4 Review of Abelian Groups 69
   4.5 Chain Groups, Boundary Maps and Homology Groups 69
   4.6 Computation of Homology Groups Of Surfaces 71
      4.6.1 The Cylinder 71
      4.6.2 Torus 74
      4.6.3 The Projective Plane 75
   4.7 Some Remarks and Conclusion 76
## 5 Differential Topology and Differential Geometry

*By Kingshook Biswas and Soma Maity*

### I A Brief Introduction to Manifolds and Differential Forms

5.1 Introduction: Smooth Manifolds, Tangent Spaces, Derivatives

- 5.1.1 Examples of manifolds
- 5.1.2 Manifolds as configuration spaces of mechanical systems
- 5.1.3 Tangent spaces and derivatives
- 5.1.4 Tangent bundle, vector fields and flows

5.2 Differential forms, wedge products and exterior derivative

- 5.2.1 Multilinear forms, alternating forms, tensor products, wedge products
- 5.2.2 Differential forms on manifolds
- 5.2.3 Integration of differential forms
- 5.2.4 Boundary of a chain
- 5.2.5 Exterior derivative of differential forms
- 5.2.6 Stokes’ Theorem

5.3 de Rham cohomology of smooth manifolds

- 5.3.1 Poincaré Lemma
- 5.3.2 de Rham’s Theorem

### II An Introduction to Riemannian Geometry

5.4 A Non-Euclidean Geometry

- 5.4.1 Hyperbolic Geometry

5.5 Riemannian Geometry

- 5.5.1 Riemannian curvature

## 6 Vector Bundles

*By Utsav Choudhury and Atreyee Bhattacharya*

### I Vector Bundles and K-theory

6.1 Introduction

6.2 Basic definitions and examples

- 6.2.1 Examples
- 6.2.2 Map of vector bundles
- 6.2.3 Sections of a vector bundle
- 6.2.4 Examples

6.3 Operations

- 6.3.1 Direct Sum
- 6.3.2 Inner Product
- 6.3.3 Tensor Product
- 6.3.4 Dual
- 6.3.5 Pullback

6.4 Clutching function

6.5 Complex K-theory and Bott periodicity

- 6.5.1 The abelian group structure
- 6.5.2 The ring structure and external product
- 6.5.3 Non zero vector field on $S^2$
II An introduction to the Chern-Weil Theory in vector bundles . . . . 125
  6.6 Introduction . . . . . . . . . . . . . . . . . . . . . . . . . . . . 125
  6.7 Connection and curvature in a vector bundle . . . . . . . . . . 125
     6.7.1 Connection in a smooth manifold and curvature . . . . . 125
     6.7.2 Connections in a vector bundle . . . . . . . . . . . . . . 128
     6.7.3 Curvature in a vector bundle . . . . . . . . . . . . . . . 130
     6.7.4 Behaviour of the connection and curvature forms under change of (local) trivializations . . . . . . . . . . 132
     6.7.5 Connections and curvature in a complex vector bundle . . 134
  6.8 Characteristic classes . . . . . . . . . . . . . . . . . . . . . . . 135
     6.8.1 Invariant polynomials . . . . . . . . . . . . . . . . . . . 136
     6.8.2 Chern classes and Pontrjagin classes . . . . . . . . . . . 138
     6.8.3 Examples . . . . . . . . . . . . . . . . . . . . . . . . . . 140

7 Special Topics: A Crash Course on Knots 143
  By Mahan Mj
  7.1 Introduction: Equivalence between Knots . . . . . . . . . . . . 143
  7.2 Knot Invariants . . . . . . . . . . . . . . . . . . . . . . . . . . 144
  7.3 The Knot Group . . . . . . . . . . . . . . . . . . . . . . . . . . 144
     7.3.1 Wirtinger presentation . . . . . . . . . . . . . . . . . . . 145
     7.3.2 The first homology . . . . . . . . . . . . . . . . . . . . . 146
  7.4 Torsion . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 146
  7.5 Seifert surfaces . . . . . . . . . . . . . . . . . . . . . . . . . . 147
  7.6 Alexander Polynomial . . . . . . . . . . . . . . . . . . . . . . . 147
  7.7 Skein Relations . . . . . . . . . . . . . . . . . . . . . . . . . . 148
     7.7.1 Alexander polynomial . . . . . . . . . . . . . . . . . . . 148
     7.7.2 Jones polynomial . . . . . . . . . . . . . . . . . . . . . . 148
  7.8 Linking Number . . . . . . . . . . . . . . . . . . . . . . . . . . 149

8 Special Topics: A Short Course on Group Theory 153
  By Bobby Ezhuthachan
  8.1 Groups and Physics . . . . . . . . . . . . . . . . . . . . . . . . . 153
  8.2 Basic definition . . . . . . . . . . . . . . . . . . . . . . . . . . 154
  8.3 Abelian Groups . . . . . . . . . . . . . . . . . . . . . . . . . . 155
  8.4 Nonabelian cases: Conjugacy class, cosets . . . . . . . . . . . . 158
  8.5 Commutator subgroup and abelianization . . . . . . . . . . . . 159
  8.6 Examples of Groups . . . . . . . . . . . . . . . . . . . . . . . . 159
     8.6.1 The Quaternionic Group . . . . . . . . . . . . . . . . . . . 159
     8.6.2 Rotations of a rigid body . . . . . . . . . . . . . . . . . . 160
  8.7 $SU(2)$ and $SO(3)$ . . . . . . . . . . . . . . . . . . . . . . . . 162
     8.7.1 $SU(2)$ matrices . . . . . . . . . . . . . . . . . . . . . . . 163
  8.8 Conformal transformations . . . . . . . . . . . . . . . . . . . . . 165
## II Physics problems

### 9 Use of Topology in physical problems

12 Topology, geometry and quantum interference in condensed matter physics
   By Alexander Abanov

12.1 Introductory remarks
   12.1.1 Theory of Everything in condensed matter physics
   12.1.2 Spontaneous symmetry breaking and an emergent topology
   12.1.3 Additional reading

12.2 Motivating example: a particle on a ring
   12.2.1 Classical particle on a ring: Action, Lagrangian, and Hamiltonian
   12.2.2 Quantum particle on a ring: Hamiltonian and spectrum
   12.2.3 Quantum particle on a ring: path integral and Wick’s rotation
   12.2.4 Quantum doublet
   12.2.5 Full derivative term and topology
   12.2.6 Topological terms and quantum interference
   12.2.7 General definition of topological terms
   12.2.8 Theta terms and their effects on the quantum problem
   12.2.9 Exercises

12.3 Path integral for a single spin
   12.3.1 Quantum spin
   12.3.2 Fermionic model
   12.3.3 Derivation of a WZ term from fermionic model without chiral rotation
   12.3.4 Quantum spin as a particle moving in the field of Dirac monopole
   12.3.5 Reduction of a WZ term to a theta-term
   12.3.6 Properties of WZ terms
   12.3.7 Exercises

12.4 Spin chains
   12.4.1 Path integral for quantum magnets
   12.4.2 Continuum path integral for Quantum Antiferromagnet
   12.4.3 RG for $O(3)$ NLSM
   12.4.4 $O(3)$ NLSM with topological term
   12.4.5 Boundary states for spin 1 chains with Haldane’s gap
   12.4.6 AKLT model
   12.4.7 Exercises

12.5 Conclusion

12.6 Acknowledgements

Appendix A: Topological defects and textures
Appendix B: Integrating out 1 field
Appendix C: Homotopy groups often used in physics
13 Dirac quasiparticles and Majorana modes in condensed matter systems 333
   By K. Sengupta
