Contents

Part I  Knowledge-Based Economy and Regional Competitiveness

1  Knowledge Economy .......................................................... 3
   Emergence of Knowledge Economy ........................................ 3
   Definition of Knowledge Economy ........................................ 4
       Knowledge Economy’s Industrial Definition ..................... 5
       Knowledge Economy’s Occupational Definition ................. 5
       Knowledge Economy’s Innovation-Related Definition .......... 6
   Significant Changes Through the Emergence of Knowledge Economy... 7
   Economic Colonization in Knowledge Economy ....................... 10
   References ................................................................. 12

2  Regional Competitiveness: Key Players in Industrial Cluster in Knowledge-Based Industrial Cluster .......................... 13
   Regional Competitiveness Defined ....................................... 13
   Clusters and Networks Towards Regional Competitiveness .......... 13
   The Origin of a “Cluster” .................................................. 15
   Clusters and Competitive Advantage .................................... 15
       Government ............................................................. 16
       Private Sector ......................................................... 17
       Academe .............................................................. 18
   References ................................................................. 18

Part II  Academe to Enhance Regional Competitiveness

3  Academe in Improving Knowledge-Based Regional Competitiveness ........................................ 23
   Academe and Their Roles in Knowledge Economy ................. 23
What Then Is the Strategic Role that Tertiary Education Can Play in the Knowledge Era? .......................... 23
References ......................................................... 27

4  Academes’ Functions Within Innovation System. .................. 29
Academes’ Functions Within an Innovation System ................. 29
   Linear Model .............................................................. 30
   Contrasting Norms ....................................................... 30
   Mode 2 ................................................................. 31
   Triple Helix ............................................................ 32
References ................................................................. 33

5  Academe to Enhance Regional Competitiveness Through Industrial Cluster in Different Regions. ............. 35
Academe and Regional Cluster Development ....................... 35
   Research, Innovation and Knowledge Transfer ................... 36
   Proximity Effect and Knowledge Transfer ....................... 37
   High Skill: A Source of Competitiveness ......................... 37
   University as Social Capital Provider in Collaborative Network . 38
   Academe and Emergences of Regional Clusters .................. 39
   Cambridge Cluster, United Kingdom .............................. 40
   Waterloo, Canada ...................................................... 40
   Heidelberg, Germany ................................................... 41
   Strait of Taiwan: Zhangjiang, China, and Hsinchu, Taiwan .... 42
References ................................................................. 43

Part III  ‘Coopetition’ Towards Regional Competitiveness

6  Academe-Industry-Government (A-I-G) Towards Regional Competitiveness. ................................. 47
The Evolution of Triple Helix of Academe-Industry-Government Framework in Knowledge Economy .......................... 47
The Triple Helix Model of Innovation ................................ 49
Experience of the Academe-Industry-Government Framework in Various Regions and Countries .................. 51
   United States of America ............................................. 51
   United Kingdom ......................................................... 52
   Europe ................................................................. 54
   Italy ................................................................. 54
   Germany .............................................................. 55
   Latin America ........................................................ 55
   Japan ................................................................. 56
   Thailand .............................................................. 56
References ................................................................. 58
7 Development of Industrial Cluster in Emerging Economy: 
Case Study of Academe–Industry–Government Partnership 
in Automotive Cluster of Thailand .......................... 61
Research Design .................................................. 62
University–Industry Partnership in Thailand’s Automotive Cluster ...... 63
Thailand’s Automotive Industry ................................ 63
University–Industry–Government Dynamics to Upgrade Thai 
Automotive Industry and Automotive Innovation System ............ 64
Technological Capacity .......................................... 64
Universities in the Innovation System ................................ 65
University–Industry Cooperation in Thai Automotive Industry ... 66
University–Industry–Government Cooperation to Further Improve 
Competitiveness of Thailand’s Automotive Cluster .................. 72
References ......................................................... 77

8 U-TECH Framework ............................................. 79
U-TECH Framework’s Development .................................. 80
Reference .......................................................... 84

for Regional Competitiveness .................................. 85
“Coopetition” or “Coopetitive System of Value Creation” Defined . 85
Network Coopetition Model 1 ..................................... 90
Network Coopetition Model 2 ..................................... 90
Network Coopetition Model 3 ..................................... 91
Reference .......................................................... 92

10 Academe in Coopetitive System of Value Creation for Regional 
Competitiveness: Success Factors ................................ 93
Agglomeration Economies and External Effects ......................... 93
Firm-Building Capabilities ........................................ 94
Managerial Workforce ............................................ 95
Supply of Highly Skilled Technical Workers .......................... 95
Connection to Market ............................................. 96
Conclusion .......................................................... 97
Reference .......................................................... 98

Bibliography ......................................................... 99

Index .............................................................. 103
Coopetition for Regional Competitiveness
The Role of Academe in Knowledge-Based Industrial Clustering
Mongkhonvanit, J.
2014, XVII, 104 p. 17 illus., Softcover
