# Contents

## 1 An Introduction to Python and Computer Programming

1.1 Introduction ................................................................. 1  
1.1.1 Python and Computer Programming ......................... 2  
1.2 Preliminaries ................................................................. 2  
1.2.1 The Computer ......................................................... 3  
1.2.2 The File System ...................................................... 3  
1.2.3 Text User Interfaces to Operating Systems ................. 5  
1.2.4 The Python Application Program ............................... 8  
1.2.5 Python and Environment Variables .............................. 9  

## 2 Using Python as a Calculator

2.1 Using Python as a Calculator ........................................ 13  
2.1.1 Floating Point Expressions ...................................... 15  
2.1.2 Identifiers, Variables and Assignment ......................... 18  
2.2 The Underlying Mechanism ........................................... 21  
2.2.1 Information ............................................................ 22  
2.2.2 Python Memory Management ...................................... 25  
2.3 More Mathematical Functions Using the `math` and `cmath` Modules ...................................................... 29  
2.3.1 Complex Numbers and the `cmath` Module ................. 31  
2.3.2 Random Numbers and the `random` Module .................. 34  

## 3 The First Python Program

3.1 Text Input and Output Using Strings .............................. 37  
3.1.1 Text IO ................................................................. 45  
3.2 The First Python Program ............................................. 49  
3.2.1 The Structure of Python Programs ............................... 51
3.3 The Underlying Mechanism of Module Execution
3.3.1 Module Objects
3.3.2 Library Modules
3.3.3 The Mechanism of Module Importation
3.3.4 Duplicated Imports
3.3.5 Importing Specific Identifiers

4 Branching and Looping
4.1 The Boolean Type
4.2 Branching Using the if Statement
4.2.1 Nested if Statements
4.3 Looping Using the While Statement
4.3.1 Branching Nested in a Loop
4.3.2 Break and Continue
4.4 Debugging

5 Problem Solving Using Branches and Loops
5.1 Basic Problems
5.1.1 Summation
5.1.2 Iteratively Calculating Number Sequences
5.2 Numerical Analysis Problems
5.2.1 Numerical Differentiation
5.2.2 Numerical Integration
5.2.3 Monte-Carlo Methods
5.2.4 Differential Equations and Iterative Root Finding
5.3 Tuples and the for loop
5.3.1 Tuples
5.3.2 The for Loop
5.3.3 Problem Solving by Traversal of a Tuple

6 Functions
6.1 Function Definition Using lambda expressions
6.2 Function Definition Using the def Statement
6.2.1 The Dynamic Execution Process of Function Calls
6.2.2 Input Arguments
6.2.3 Return Statements
6.2.4 Modularity
6.3 Identifier Scopes
6.4 The Underlying Mechanism of Functions

7 Lists and Mutability
7.1 Lists—A Mutable Sequential Type
7.1.1 List Mutation
10.2.3 The Underlying Mechanism of Class Extention .... 267
10.2.4 Object Oriented Programming ...................... 269
10.3 Exception Handling .................................. 269
  10.3.1 Exception Handling ................................ 271
  10.3.2 Exception Objects ................................. 274

11 Summary .................................................. 279
  11.1 The Structure of a Python Program .................. 279
    11.1.1 Expressions ..................................... 279
    11.1.2 Statements ..................................... 283
  11.2 The Data Model of Python ............................ 285
    11.2.1 Identity, Type and Value ....................... 285
    11.2.2 Attributes and Methods ........................ 286
    11.2.3 Documenting Objects ............................ 287
  11.3 Modules and Libraries ............................... 289
    11.3.1 Packages ....................................... 290
    11.3.2 Library Modules ................................. 291
An Introduction to Python and Computer Programming
