

Contents

Field-Based Simulations of Nanostructured Polyelectrolyte Gels.	1
Debra J. Audus and Glenn H. Fredrickson	
Investigations on the Redox Performance of Pure and Doped CeO₂ by Comparing Solid State Reaction and Pechini Synthesis	11
Alexander Bonk, Annika C. Maier, Dariusz Burnat, Ulrich F. Vogt and Andreas Züttel	
Numerical Investigations on Hydrogen-Assisted Cracking (HAC) in Duplex Stainless Steels	21
Tobias Mente and Thomas Böllinghaus	
Size Effect on the Electrodeposited Nickel Investigated by Micro-compression Test	33
Takashi Nagoshi, Tso-Fu Mark Chang, Tatsuo Sato and Masato Sone	
Thermoelectric Transport from First-Principles—Biphenyl-Based Single-Molecule Junctions	43
Marius Bürkle, Fabian Pauly and Yoshihiro Asai	
Evolution of Fe-Intermetallic Compounds in the Semi-Solid State of Al–Mg–Si–Fe Alloys	53
Chakkrist Phongphisutthinan, Equo Kobayashi and Tatsuo Sato	
Imaging ToF-SIMS as a Chemical Metrology Tool to Support Material and Analytical Science	63
Gerald Holzlechner, Oded Sobol, Thomas Böllinghaus and Wolfgang Unger	

Environmental Stability of Organic Semiconductors for Use in Optoelectronic Devices	73
George F.A. Dibb, James C. Blakesley and Fernando A. Castro	
Spinel MnCo₂O₄ and Spinel-Nanocarbon Hybrids as Bifunctional Catalysts for Alternating Oxygen Reduction and Evolution Reactions	83
Xiaoming Ge	
Monte Carlo Study of Alloy Structures in Bulk and Nanostructured Systems.	93
Tongjai Chookajorn	
Microdefects Modeling in Germanium Single Crystals.	101
Piotr Śpiewak, Jan Vanhellemont and Krzysztof J. Kurzydłowski	
The Influence of Temperature and Ventilation Conditions on Combustion Products of Polymers and on Smoke Toxicity	113
Andrea Loehnert and Christian Knaust
