

Hotel reservation 2019

Venue: Hotel Marriott Courtyard Zurich Nord
Max-Bill-Platz 19, CH-8050 Zurich, Switzerland

Please reserve your hotel room for the seminars directly with the hotel (and with payment to the hotel). Note that there are a limited number of discounted rooms available for the seminar on a first-come first-serve basis. Please reserve your room at your earliest convenience. The block reservation cut-off date is May 1, 2019.

- Single room (CHF 279 including breakfast and WLAN)
- Double room (CHF 299 including breakfast and WLAN)

Lecturers

David Basin is a full professor at ETH Zurich and chair of the department of Computer Science. He received his Ph.D. in Computer Science from Cornell University in 1989 and his Habilitation in Computer Science from the University of Saarbrücken in 1996. From 1997–2002 he held the chair of Software Engineering at the University of Freiburg in Germany. His research areas are Information Security and Software Engineering. He is the founding director of the ZISC, the Zurich Information Security Center, which he led from 2003-2011. He is Editor-in-Chief of the ACM Transactions on Privacy and Security and of Springer-Verlag's book series on Information Security and Cryptography. He has co-founded three security companies, is on the board of directors of Anapaya Systems AG as well as various management and scientific advisory boards, and has consulted extensively for IT companies and government organizations.

Ueli Maurer is a full professor of Computer Science at ETH Zurich. His research interests include the theory and applications of cryptography and information security. He served as the Editor-in-Chief of the Journal of Cryptology from 2001 to 2010, and Editor-in-Chief of Springer Verlag's book series in Information Security and Cryptography from 1997 to 2012. Maurer holds several patents for cryptographic systems. He serves on several management and scientific advisory boards, has consulted extensively for the financial industry, the IT industry, and government organisations, and has co-founded several companies, including the blockchain project Concordium. He is an IEEE Fellow, an ACM Fellow, an IACR Fellow, and recipient of the 2013 Vodafone Innovation Award for Mobile Communications and the 2016 RSA Award for Excellence in the Field of Mathematics.

Seminar goals

Information Security and Cryptography are of vital importance today, with applications in communication and information systems, cyberphysical systems, and more generally, in the digitalization of businesses and services. Our 2019 seminar covers complementary topics and is aimed at different target audiences, providing an in-depth coverage of Information Security and Cryptography from both a conceptual and an application-oriented viewpoint. At the same time, the mathematical, algorithmic, protocol-specific, and system-oriented aspects are explained in a way understandable to a wide audience. This includes the foundations needed to understand the different approaches, a critical look at the state-of-the-art, and a perspective on future security technologies.

The seminar is aimed at all professionals who need up-to-date knowledge and expertise in this area. This includes system designers and engineers, security experts, IT-professionals, instructors, project managers, consultants, law enforcement professionals, and professional cryptographers.

The material is presented at three different levels. At the *highest level*, the basic concepts are presented in detail, but abstractly (e.g., as black boxes), without mathematics. No background is required to follow at this level. At an *intermediate level*, the most important concrete schemes, models, algorithms, and protocols are presented as well as their applications. Here some minimal mathematical and systems background is assumed. At the *deepest level*, which is not required to understand the higher levels, different special topics, requiring some mathematical background, are discussed.

Venue

The seminar will take place at the Marriott Courtyard Zurich North, Max-Bill-Platz 19, CH-8050 Zurich, Switzerland. The seminar hotel is conveniently located between downtown Zurich and the airport, easily accessible from both with public transportation.

Information Security and Cryptography

Fundamentals and Applications

June 17–19, 2019

Lecturers:

Prof. David Basin, ETH Zurich
Prof. Ueli Maurer, ETH Zurich

Zurich, Switzerland

Program

Starting 09:00 on Monday June 17 and ending at 17:00 on June 19

Information Security: An Overview

Information at Risk: Threats, Security Objectives, and Security Measures
Classification of the Fundamental Information Security Problems
Course Overview

Cryptography: Basic Concepts

Some History
Types and Models of Cryptographic Systems
Cryptographic Functions, Hash Functions
Secrecy, Authenticity, and their Duality and Independence
Symmetric Cryptography: Block Ciphers, Stream Ciphers, MACs, etc.
Randomness and Pseudo-Randomness
Cryptanalytic Attacks, Assumptions, Security Definitions
Public-Key Encryption and Secret-Key Agreement
Digital Signatures, Certificates

Cryptography Foundations

Discrete Mathematics Basics, Groups, Fields
Theoretical Foundations of Cryptography
Discrete Logarithms, Factoring, and other Hard Problems
Design and Analysis of Cryptographic Systems
RSA: Workings and Security Analysis
Diffie-Hellman Protocol: Workings and Security Analysis
Elliptic Curve Cryptography
Modes of Operation for Cryptographic Systems
Security Proofs, Indistinguishability, Reductions
Constructive Cryptography and Universal Composability

System and Network Security

Networking Essentials
Trade-offs in Securing Network Layers
Security Protocols including Kerberos, SSL, IPsec
Security Architectures
Firewalls and Intrusion Detection

PKI and Key Management

Key Management Challenges
PKI Certificates, Architectures, and Standards
Key Revocation and Recovery
Trust Models (Direct, Cross, Hierarchical, Web of Trust)
X.509 and PGP
Alternative PKIs: Client, CA, and Domain-Centric Options
Certificate Handling in Web Browsers

Authentication, Authorization, and Access Control

AAA Architectures: Authentication, Authorization, and Access Control
Authentication: Passwords, Biometrics, and Token-based
Policies and Models
Access Control Matrix Model
DAC and MAC Models
BLP, Biba, and Chinese Wall Models
RBAC, XACML
Single Sign-on
Identity Management

Privacy and Usage Control

Data Protection, GDPR, and Control of Intellectual Property
Anonymity and Privacy-enhancing Technologies
Proxies, Mix Networks, and other Anonymity Approaches
Usage Control Architectures
Digital Rights Management and Trusted Computing

Security Engineering and Web-Application Security

Security Engineering in the Software Engineering Life Cycle
Common Vulnerability Classes including: Session Management,
Injection Attacks, Cross-Site Scripting, and Race Conditions.
Security Standards and Certification

Advanced Topics in Cryptography

Zero-Knowledge Protocols
Secure Multi-Party Computation
E-Voting
Quantum Cryptography

Blockchains and Digital Payment Systems

Classification of Digital Payment Systems, E-Cash
Blockchains, Smart Contracts
Crypto-Currencies, Bitcoin

Seminar enrollment 2019

Venue: Hotel Marriott Courtyard Zurich Nord
Max-Bill-Platz 19, CH-8050 Zurich, Switzerland

"Information Security and Cryptography" on June 17-19, 2019 in Zurich, Switzerland

Early registration before February 28, 2019: CHF 3,500

Standard registration as from March 1, 2019: CHF 3,900

Payment to be made upon receipt of invoice by means of bank transfer.

Price includes course material, lunches, coffee breaks, and beverages during the seminar.
