Overview
This series covers all topics dealing with essential usage of mathematics for the formal conceptualization, modeling, theory, computation, and technology in music. It comprises symbolic, physical, and psychological reality, including areas such as mathematical music theory, musical acoustics, performance theory, sound engineering, music information retrieval, AI in music, programming, soft- and hardware for musical analysis, composition, performance, and gesture. The series also includes mathematically oriented or computational aspects of music semiotics, philosophy, and psychology.

Advisory Board
Emmanuel Amiot [Université de Perpignan]
Christina Anagnostopoulou [National and Kapodistrian University of Athens]
Yves André [CNRS, Paris, Sorbonne Universités]
Gérard Assayag [IRCAM Paris, CNRS, Sorbonne Universités]
Elaine Chew [Queen Mary, University of London]
Johanna Devaney [Brooklyn College]
Andrée Ehresmann [Université de Picardie, Amiens]
Thomas M. Fiore [University of Michigan-Dearborn]
Harald Fripertinger [Karl-Franzens-Universität Graz]
Emilio Lluis-Puebla [UNAM México City]
Mariana Montiel [Georgia State University, Atlanta]
Thomas Noll [Escola Superior de Música de Catalunya, Barcelona]
John Rahn [University of Washington]
Anja Volk [Universiteit Utrecht]

Selected Published Titles
Emmanuel Amiot
Music Through Fourier Space: Discrete Fourier Transform in Music Theory
ISBN 978-3-319-45580-8

Eytan Agmon
The Languages of Western Tonality
ISBN 978-3-642-39586-4

Guerino Mazzola, René Guitart, Jocelyn Ho, Alex Lubet, Maria Mannone, Matt Rahaim, Florian Thalmann
The Topos of Music, 2nd ed. (enlarged and revised)
Vol. III: Gestures: Musical Multiverse Ontologies
ISBN 978-3-319-64479-0
