

Instructions for Authors

PUBLICATION POLICIES

Manuscript Submission: Manuscripts should be submitted online through our website (<http://www.editorialmanager.com/heab/default.aspx>) and should be submitted by the corresponding author along with a cover letter declaring the “The authors have no conflicting interests, and all authors have approved the manuscript and agree with its submission to the journal Horticulture, Environment, and Biotechnology (HEB)”. The manuscript should be prepared strictly according to the HEB format as provided in the ‘Instructions to Authors’. Membership in the society is not a requirement for publication, but authors are urged to consider becoming a member.

Scope or Subject Matter: The Horticulture, Environment, and Biotechnology is a bimonthly publication of papers of original work dealing with fundamental and applied subject matters on horticultural plants and their related products. The essential contents of manuscripts must not have been published in other refereed publications. Submission of a manuscript to the journal implies no concurrent submission elsewhere.

Copyright: Submission of a manuscript implies that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all co-authors, if any, as well as – tacitly or explicitly – by the responsible authorities at the institution where the work was carried out. The author warrants that his/her contribution is original and that he/she has full power to make this grant. The author signs for and accepts responsibility for releasing this material on behalf of any and all co-authors. Transfer of copyright to Korean Society for Horticultural Science (KSHS) and Springer becomes effective if and when the article is accepted for publication. After submission of the Copyright Transfer Statement signed by the corresponding author, changes of authorship or in the order of the authors listed will not be accepted by KSHS and Springer. The copyright covers the exclusive right (for U.S. government employees: to the extent transferable) to reproduce and distribute the article, including reprints, translations, photographic reproductions, microform, electronic form (offline, online) or other reproductions of similar nature.

An author may self-archive an author-created version of his/her article on his/her own website. He/she may also deposit this version on his/her institution's and funder's (funder designated) repository at the funder's request or as a result of a legal obligation, including his/her final version, provided it is not made publicly available until after 12 months of official publication. He/she may not use the publisher's PDF version which is posted on www.springerlink.com for the purpose of self-archiving or deposit. Furthermore, the author may only post his/her version provided acknowledgement is given to the original source of publication and a link is inserted to the published article on Springer's website. The link must be accompanied by the following text: "The original publication is available at www.springerlink.com."

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission from the publishers. The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.

While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors, the editors, nor the publishers can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.

Review Policy and Procedure: All manuscripts must be submitted in English. Manuscripts submitted for publication must be reviewed by more than two reviewers (internal review process) and revised. Submitted manuscripts that do not conform to the KSHS standards will be returned to authors for corrections and resubmission. A manuscript number is assigned to each manuscript, which will be sent to the corresponding author. Always refer to the manuscript number in all correspondence thereafter.

Submitted manuscripts are reviewed by more than two reviewers. Reviewed manuscripts are sent back to the corresponding author along with comments from reviewers. Some revision is usually necessary after the reviews, and final acceptance generally depends on extent of revision. In submitting revised manuscripts, authors are requested to submit explanations on how the revisions were made and the reason why they do not agree with the reviewers for those points on which they have no revision. A manuscript is considered withdrawn, if the

author has not responded in 3 months to a request for revision. The corresponding authors will be notified for acceptance.

Procedure after Acceptance: Accepted manuscripts must be submitted online through our website (<http://www.editorialmanager.com/heab/default.aspx>). Preparation of manuscripts with Microsoft Word is desirable; and other word processing packages are not acceptable. Galley proof is sent to the corresponding author. Authors must proof read carefully, correct if necessary and fill out a form 'Copyright Transfer Statement', and then, return to the KSHS as soon as possible. Authors will be charged for any major alterations they make in the page proofs that are not the error of the editors.

Publication Fees: The author(s) must pay a publication fee for printed pages. Up to 4 pages, author(s) must pay KRW 150,000, and from the 5th page extra KRW 50,000 will apply per page. And figures printed in color will apply extra KRW 150,000 per page. Fifty reprints will be sent to the corresponding author free of charge. Additional reprints can be ordered at a charge. These charges must be defrayed without delay at the request of the KSHS.

MANUSCRIPT PREPARATION

Format: Manuscripts including tables and figures, 1.5 spaced in a MS Word format with margins of 20 mm of left and right, 25 mm of top and 30 mm of bottom side, should be submitted along with a submission form through our website as the form of attached file. The journal requires the use of the metric system, preferentially SI units, and centered period between units (e.g. mg L⁻¹). Latin words or phrases are in *italics*, with the exception of very common expressions such as 'i.e.', 'e.g.', 'et al.', 'in vitro', 'in vivo', 'ex vitro', 'in situ', 'de novo', and 'etc.'. All pages must be numbered consecutively and all lines also must be numbered consecutively from the title page, including the acknowledgements, references, tables, and figure legends. All the manuscripts should be written in standard scientific English. Non-native English authors are highly recommended to use a scientific English editing service to improve the manuscript prior to submission to HEB.

Manuscript Organization: Manuscript should be arranged in the following order: Title, Abstract, Additional key words, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, Literature Cited, Tables, and Figures. In some cases, the Results and the Discussion can be combined into one section for more effective presentation. Reports and review manuscript should be arranged in the following order: Title, Abstract, Additional key words, Introduction, Sub-title, Conclusion, Acknowledgments, Literature Cited, Tables, and Figures.

Title: The title should be a concise description of the contents of the paper. Capitalize the first letter of all title words except articles, prepositions, and conjunctions. Use common names for well-known species. Cultivar names can be used only for comparisons or when the characteristics of the cultivar need to be emphasized. Do not use an abbreviation except for common terminology. Serial titles indicating a series of related papers are not generally recommended, unless manuscripts are submitted together. On the title page, the title, full name of each author and institution(s) where the research was done, with mailing address(es), should be included. If an author has since moved to a different institution, the new location can be indicated in a footnote. The corresponding author should be noted by an asterisk. For multiple affiliations, use respective superscript numbers to match authors and their affiliations.

Abstract: The Abstract should be a concise summation of the objectives, materials used, major treatments, results and conclusions written in a paragraph. Abstract must not exceed 5% of the length of the paper. Use a chemical name followed by a common name in parenthesis when first mentioned, and then use the common name thereafter. The Abstract should not contain any undefined abbreviations or unspecified references. Alphabetically list five to six additional key words, which have not been used in the title, in lower case. Common species name(s), chemical name(s), physiological or pathological term(s), and genetic term(s) can be used.

Introduction: The introduction should provide the necessary background information for the average reader; it should be both complete and concise. Previous publications that form a basis for the work presented must be cited.

Materials and Methods: In the Materials and Methods section, the experimental procedures should be described in sufficient detail that they could be followed by other researchers in the field. This section should be made as concise as possible by reference to procedures that have already been published, unless the method used here was greatly modified. Scientific names of species and cultivar names used must be included regardless of their appearance in Abstract or Introduction. Sizes, quantities, and suppliers of materials must be indicated, preferentially in common names. Treatments, experimental design, and statistical method must be explained in detail. Commonly known methods or analyses may be briefly explained by citing relevant references.

Results: The Results section contains the results of research given in detail, with tables and figures as needed. Results that can be expressed easily in the text should not be given in the form of tables or figures.

Discussion: The Discussion section should not contain a repeat of the results, but should explain the meaning of the findings and the authors' conclusions, together with a discussion of any contradiction of already published reports.

Acknowledgement(s): The Acknowledgements section should be as brief as possible. Any grant that requires acknowledgement(s) should be mentioned. The names of funding organizations should be written in full. Acknowledgement(s) of help from colleagues and professional associates are appropriate, but avoid acknowledgement(s) of routine secretarial help or family members.

Literature Cited

- Text: If references are made in the text listed in Literature Cited, refer to them by the author's family name(s) and the year published according to the Harvard system. Citation may be made directly (or parenthetically). Groups of references should be listed first chronologically, then alphabetically.

- List: All literature cited should be listed in an alphabetical order, by the author's family names. For the same author, or for the same set of authors, literature cited should be arranged chronologically. If there is more than one publication in the same year for the same author(s), the letter a, b, etc. should be added to the year. References with more than 9 authors should list the first 9 authors followed by 'et al'. Do not use an issue number if the journal uses consecutive for each volume. Journal names should be abbreviated according to the List of Title Word Abbreviations: <http://www.issn.org/services/online-services/access-to-the-ltwa/>, but those are abbreviated without period. Use of DOI is highly encouraged. Papers accepted for publication are cited as 'in press' or 'online published'; the DOI should be given if the paper is published online. Note that the use of unpublished work by others (including information obtained in private communication(s)) requires their permission. Unnecessarily long lists of references, including excessive self-citation, should be avoided.

Please note the following examples, and refer details to the literature citations in the current issue of the HEB.

- Examples in text: 'as described (Weeks et al., 1994; Kim, 1999, 2014a, 2014b; Vannini and Chilosi, 2014). Park et al. (2012) have shown in ... Chang and Lin (2011) demonstrated that ...'

- Examples in list:

1) Journal Article

Garcia-Hernandez M, Berardini TZ, Chen G, Crist D, Doyle A, Huala E, Knee E, Lambrecht M, Miller N, Mueller LA, et al (2002) TAIR: a resource for integrated Arabidopsis data. *Funct Integr Genomics* 2:239-253

Chang CC, Lin CJ (2011) LIBSVM: a library for support vector machines. *ACM Trans Intell Syst Technol* 2:Article 27

2) Journal Article + DOI

German MA, Kandel-Kfir M, Swarzburg D, Matsevit T, Granot D (2003) A rapid method for the analysis of zygosity in transgenic plants. *Plant Sci* 164:183–187. doi:10.1016/S0168-9452(02)00381-3

3) Electronic Article

Chen WH, Zhao XM, van Noort V, Bork P (2013) Human monogenic disease genes have frequently functionally redundant paralogs. *PLOS Comput Biol* 9:e1003073

4) Online-First Article

Weeks DP, Spalding MH, Yang B (2015) Use of designer nucleases for targeted gene and genome editing in plants. *Plant Biotechnol J* (in press). doi:10.1111/pbi.12448

5) Patent

Ubersax JA, Platt DM December 9, 2010. Genetically modified microbes producing isoprenoids. US Patent Application No. 20100311065 A1

6) Book

Ribéreau-Gayon P, Dubourdieu D, Donèche B, Lonvaud A (2006) Botrytized sweet wines (Sauternes and Tokay). In RG Pascal, ed, *Handbook of Enology: The Microbiology of Wine and Vinifications*, Ed 2, Vol 1. John Wiley & Sons, West Sussex, UK, pp 449-458

Vannini A, Chilosi G (2013) Botrytis infection: grey mould and noble rot. In F Mencarelli, P Tonutti, eds, *Sweet, Reinforced and Fortified Wines: Grape Biochemistry, Technology and Vinification*. Wiley-Blackwell, Chichester, UK, pp 159-169

7) Electronic Book

Jander G, Joshi V (2009) Aspartate-derived amino acid biosynthesis in *Arabidopsis thaliana*. The *Arabidopsis* Book 7:e0121. doi:10.1199/tab.0123

Accessed 27 June 2014

Tables: Tables should be numbered with Arabic numerals and designed to fit the single-column width or the full page width. Tables should always be cited in text in a consecutive numerical order. Each table should have a brief title and, where necessary, a short statement about the specific methods used. The intent is to avoid extensive legends, placing detailed protocols in the Materials and Methods section, but leaving no doubt as to the procedures used to obtain the data. Unit must be clearly indicated for each of the entries in the table. Footnotes to tables should appear beneath the tables and should be designated by lower case superscript letter, z, y, x, etc. Each table should be prepared on a separate page.

Figures: Figures should be numbered with Arabic numerals and should always be cited in text in a consecutive numerical order. Manuscripts submitted should contain all figures of quality suitable for publication, especially for color printing. Do not include titles or captions within your illustrations and avoid effects such as shading, outline letters, etc. Figure parts should be denoted by uppercase letters (A, B, C, etc). Figure captions begin with the term Fig., followed by the figure number. Figure legends should provide enough information so that the figure is understandable without reference to the text. However, details given in Materials and Methods or in other tables or figures should not be repeated, but merely referred to. The method that is unique to one of several experiments may be reported in a legend, if it can be described very briefly. All symbols and abbreviations used in the figure that have not been defined elsewhere should be defined.
