Prerequisites for Publication
Radiological Physics and Technology

It is the policy of Radiological Physics and Technology to ensure ethical conduct of research and scientific rigor in the Journal. Accordingly, this form must be signed and submitted with the manuscript with all authors’ signatures at the time of submission. The corresponding author will submit this form on behalf of all authors. Upon receipt of the form, manuscripts are officially recognized as submissions.

Conflict of Interest Disclosure
All authors are expected to disclose to the readers any financial involvement in any organization with a direct financial interest in the subject matter or materials discussed in the manuscript. The disclosure should be inserted by the author in the “Conflict of interest” in the manuscript, which should be placed in a separate section before the reference list. This pertains to relationships with pharmaceutical companies, biomedical device manufacturers or other corporation whose products or services may be related to the subject matter of the article or who have sponsored the study. The intent of the policy is not to prevent authors with a potential conflict of interest from publication. It is merely intended that any potential conflict should be identified openly so that the readers may form their own judgments about the article with the full disclosure of the facts. It is for the readers to determine whether the authors’ outside interest may reflect a possible bias in either the exposition or the conclusions presented.

Authorship
The Editors of Radiological Physics and Technology adhere to recommendations of the International Committee of Medical Journal Editors [http://www.icmje.org] regarding criteria for authorship. Accordingly, each person listed as an author or coauthor for a submitted manuscript must meet all three criteria. An author or coauthor shall have:
1. Conceived, planned, and performed the work leading to the manuscript, or interpreted the evidence presented thus making an intellectual contribution, or both;
2. Written the manuscript or reviewed successive versions and participated in their revision;
3. Approved the final version.
Meeting these criteria should provide each author with sufficient knowledge of and participation in the work to allow him or her to accept public responsibility for the manuscript.

Certification
The author(s) should also certify that: no part of the work described has been published before; that the work is not under consideration for publication elsewhere; that if and when the manuscript is accepted for publication, the author(s) agree to automatic transfer of the copyright to the society and that the manuscript, or its parts, will not be published elsewhere subsequently in any language without the consent of the copyright holders.

Animal and Human Research
Research involving humans must be carried out in accordance with the ethical standards of the responsible committee (institutional or regional) or with the Helsinki Declaration of 1964 and all subsequent revisions. Studies involving animal experimentation must include a statement of compliance with the guidelines as recommended by the Science Council of Japan or the National Research Council’s criteria (NIH No. 86-23) in the United States.
I/We hereby certify that the work submitted is in full accordance with the statement of "Prerequisites for Publication" for Radiological Physics and Technology.
