

Springer Series in Solid-State Sciences, ISSN: 0171-1873

<https://www.springer.com/series/682>

The Springer Series in Solid-State Sciences features fundamental scientific books prepared by leading and up-and-coming researchers in the field. They strive to communicate, in a systematic and comprehensive way, the basic principles as well as new developments in theoretical and experimental solid-state science.

## Instructions for Authors

### Proposal submission and peer-review policy

Please submit your book proposal by email to the Springer publishing editor. All book proposals and manuscripts are peer-reviewed (single blind).

### Ethics guidelines and plagiarism policy

Volume editors and authors must follow the ethical guidelines outlined in our [Editorial Policies](#). *All manuscript submissions* are checked for plagiarism by Springer Editorial staff.

### Important Information for Authors

These guidelines include information about our preferred style and format. Please note that on submission, your manuscript will be converted into XML which enables your chapter to be read on a variety of electronic reading devices. This means that the chapter you submit to us might look slightly different in the final published version. These guidelines have been developed and refined with Springer authors over many years, and we are confident that you will find them easy to use

### Manuscript preparation

- **Guidelines and templates:**  
Our [Resources & Guidelines](#) page contains all pertinent information about our [manuscript guidelines for English books](#).
- **References and citation style:**  
References should be numbered consecutively as they appear in the text with numbers placed in square brackets, e.g., [1, 3], at the appropriate location in the sentence. The Springer Series in Solid-State Sciences follows a reference style based on the [reference list style of the American Physical Society \(APS\)](#).
- **Index:**  
Please provide in the manuscript submission package the terms for the subject index that is generated at the end of the book by our production staff. This may be done by (i) marking up the terms directly in the LaTeX source code (if using LaTeX); (ii) **highlighting the term** in the Word file; or (iii) providing all terms to be indexed separately as a single list included in the manuscript submission package.

### Reuse permissions for copyrighted works

If excerpts from copyrighted works (including websites) such as illustrations, tables, animations, or text quotations are included in your manuscript, authors are required to obtain permission from the copyright holder (usually the original publisher) for both the print and online format.

In many cases, [RightsLink \(Copyright Clearance Center\)](#) is the facilitator of reprint permissions. The most direct way of accessing this is through the website of the article in question, usually via the

“Reuse and Permissions” link (or something similar). Please be aware that some publishers may use a different platform.

Please refer to our [Rights, Permission & Licensing](#) page for more information.
