Memetic Computing

- ▶ Features high quality research in hybrid metaheuristics (including evolutionary hybrids) for optimization, control and design in continuous and discrete optimization domains
- ▶ Presents the best results which are fuzzed together in novel ways in order to transcend the intrinsic limitations of a single discipline

Memetic Computing dissolves the barriers separating metaheuristics, exact and approximation algorithms research and brings forth a renewed impetus towards the investigation and understanding of promising new hybrid

algorithmic technologies. The journal goes beyond current search methodologies towards innovative research on the emergence of cultural artifacts such as game, trade and negotiation strategies and, more generally, rules of behavior as they apply to, for example, robotic, multi-agent and artificial life systems. **Memetic Computing** serves as a focal publication where the latest results in Natural Computation, Artificial Intelligence, Machine Learning, Operational Research and Natural Sciences (e.g. cognitive, animal and insect's behavior) are fuzzed together in novel ways in order to transcend the intrinsic limitations of a single discipline.

Managing Editor-in-Chief

Meng-Hiot Lim, Nanyang Technological University, Singapore

Technical Editor-in-Chief

Steven Gustafson, General Electric Global Research Center, USA; **Natalio Krasnogor**, University of Nottingham, UK; **Yew Soon Ong**, Nanyang Technological University, Singapore
