Syntheses in Limnogeology

Series Editors: M. Rosen, A. Schwalb, B.L. Valero-Garces

The aim of this book series is to focus on syntheses or summaries of modern and/or ancient lake systems worldwide. Individual books will present as much information as is available for a particular lake basin or system of basins to offer readers one distinct reference as a guide to conduct further work in these areas. The books will synthesize the tectonics, basin evolution, paleohydrology, and paleoclimate of these basins and provide unbiased new interpretations or provide information on both sides of controversial issues. In addition, some books in the series will synthesize special topics in limnogeology, such as historical records of pollution in lake sediments and global paleoclimate signatures from lake sediment records.
