SpringerBriefs in Thermal Engineering and Applied Science

Subseries of SpringerBriefs in Applied Sciences and Technology

Series Ed.: F.A. Kulacki

The SpringerBriefs Series in Thermal Engineering and Applied Science presents highly relevant, concise monographs on a wide range of topics covering fundamental advances and new applications in the field. Areas of interest include thermal transport at the macro-, micro- and sub-micron levels; complex fluid flows, including multi-phase, multi-component flows; heat and mass transfer in porous and particulate systems; heat/mass transfer in solar technologies; and similar advanced topics. SpringerBriefs present succinct summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 75 to 125 pages, the series covers a range of content from professional to academic. Typical topics might include • A timely report of state-of-the-art analytical techniques • A bridge between new research results, as published in journal articles, and a contextual literature review • A snapshot of a hot or emerging topic • An in-depth case study or clinical example • A presentation of core concepts that students must understand in order to make independent contributions Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, standardized manuscript preparation and formatting guidelines, and expedited production schedules.
