Archival Science

International Journal on Recorded Information
Editors-in-Chief: K. Anderson; G. Oliver; E. Yakel

- Covers all aspects of archival science theory, methodology, and practice
- Investigates different cultures, promoting the exchange and comparison of concepts, views, and attitudes around the world
- Addresses the entire field of recorded process-related information, analyzed in terms of form, structure, and context

Please note, we are currently updating the 2018 Journal Metrics.

Archival Science promotes the development of archival science as an autonomous scientific discipline. The journal covers all aspects of archival science theory, methodology, and practice. Moreover, it investigates different cultures and promotes the exchange and comparison of concepts, views, and attitudes around the world.

Archival Science’s approach is integrated, interdisciplinary, and intercultural. Its scope encompasses the entire field of recorded process-related information, analyzed in terms of form, structure, and context. To meet its objectives, the journal draws from scientific disciplines that deal with the function of records and the way they are created, preserved, and retrieved; the context in which information is generated, managed, and used; and the social and cultural environment of records creation at different times and places.
