SpringerBriefs in Continuum Mechanics

Subseries of SpringerBriefs in Applied Sciences and Technology

Series Editors: H. Altenbach, A. Öchsner

These SpringerBriefs publish concise summaries of cutting-edge research and practical applications on any subject of Continuum Mechanics and Generalized Continua, including the theory of elasticity, heat conduction, thermodynamics, electromagnetic continua, as well as applied mathematics.

SpringerBriefs in Continuum Mechanics are devoted to the publication of fundamentals and applications, presenting concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic.

Recently published:

C. Silbermann, M. Baitsch, J. Ihlemann

Introduction to Geometrically Nonlinear Continuum Dislocation Theory

FE Implementation and Application on Subgrain Formation in Cubic Single Crystals Under Large Strains

J. Chen

Nonlocal Euler–Bernoulli Beam Theories

A Comparative Study

A. Öchsner

Partial Differential Equations of Classical Structural Members

A Consistent Approach
