Experimental Economics

A Journal of the Economic Science Association

Editors: J. Duffy; L. Gangadharan; C.N. Noussair; M.C. Villalva; R.A. Weber

- ▶ Meets the needs of economists who use experimental methods
- ▶ Publishes high quality papers in any area of experimental research in economics and related fields
- ▶ Provides a forum for interactive discussions of major issues by inviting papers and comments on broad topics

Experimental Economics is an international journal that serves the growing group of economists around the world who use experimental methods. The journal invites high-quality papers in any area of experimental research in economics and related fields (i.e. accounting, finance, political science, and the psychology of decision making). State-of-the-art theoretical work and econometric work that is motivated by experimental data is also encouraged. The journal will also consider articles with a primary focus on methodology or replication of controversial findings. We welcome experiments conducted in either the laboratory or in the field. The relevant data can be decisions or non-choice data such as physiological measurements. However, we only consider studies that do not employ deception of participants and in which participants are incentivized.
