The Journal of Materials Science: Materials in Medicine carries a long tradition of publishing authoritative biomaterials research. It covers the science and technology of biomaterials and their applications as medical or dental implants, prostheses and devices. The journal spans a wide range of topics from basic science to clinical applications and examines the metals, ceramics, polymers and composites used in orthopaedic, maxillo-facial, cardiovascular, neurological, ophthalmic and dental applications. It is compliant with open access mandates and 98% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again.

The Journal of Materials Science: Materials in Medicine publishes refereed papers providing significant progress in the application of biomaterials and tissue engineering constructs as medical or dental implants, prostheses and devices. Coverage spans a wide range of topics from basic science to clinical applications, around the theme of materials in medicine and dentistry. The central element is the development of synthetic and natural materials used in orthopaedic, maxillofacial, cardiovascular, neurological, ophthalmic and dental applications. Special biomedical topics include biomaterial synthesis and characterisation, biocompatibility studies, nanomedicine, tissue engineering constructs and cell substrates, regenerative medicine, computer modelling and other advanced experimental methodologies.

Springer, and thus the Journal of Materials Science: Materials in Medicine, is in full compliance with open access mandates. Read all about our self-archiving policy, funder compliance, and all open access options including gold and green at springer.com/openaccess.

Impact Factor: 2.325 (2016), Journal Citation Reports®
