Journal of Biomolecular NMR
Editor-in-Chief: A.G. Palmer

- Presents technical developments and innovative applications of nuclear magnetic resonance spectroscopy in the study of structure and dynamic properties of biopolymers
- Discusses applications in solution, liquid crystals, solids and mixed environments such as membranes
- Coverage includes: Three-dimensional structure determination of biological macromolecules (polypeptides/proteins, DNA, RNA, oligosaccharides) by NMR; New NMR techniques for studies of biological macromolecules; Novel approaches to computer-aided automated analysis of multidimensional NMR spectra
- 94% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

This journal presents research on technical developments and innovative applications of nuclear magnetic resonance spectroscopy in the study of structure and dynamic properties of biopolymers in solution, liquid crystals, solids and mixed environments such as membranes.

Coverage includes: Three-dimensional structure determination of biological macromolecules (polypeptides/proteins, DNA, RNA, oligosaccharides) by NMR; New NMR techniques for studies of biological macromolecules; Novel approaches to computer-aided automated analysis of multidimensional NMR spectra; Computational methods for the structural interpretation of NMR data, including structure refinement; Comparisons of structures determined by NMR with those obtained by other methods, e.g. by diffraction techniques with protein single crystals; New techniques of sample preparation for NMR experiments, such as biosynthetic and chemical methods for isotope labeling, preparation of nutrients for biosynthetic isotope labeling.

Impact Factor: 2.534 (2017), Journal Citation Reports®
