Mathematical Geosciences

Official Journal of the International Association for Mathematical Geosciences

Editor-in-Chief: R. Dimitrakopoulos

- ▶ Covers contributions to geomathematics and related data science
- ▶ Includes mathematical modeling, algorithms and computational frameworks
- ▶ Encourages publications on big data, computational intelligence and machine-learning modeling for geoscientific studies

Mathematical Geosciences publishes original, high-quality, interdisciplinary papers in geomathematics and related data science, including: Mathematical models, algorithms and computational frameworks, their implementation aspects, and real-life applications. The journal encourages publications emphasizing new developments, concepts and tools in big data and their analytics, processing, integration and assimilation, computational intelligence, machine learning and data-driven modelling, for studies of the Earth, its natural resources and the environment. Publication of method's code and datasets demonstrating their application are welcome and available as online supplementary material. Publication of method code and datasets demonstrating application are welcome and are provided as online supplementary material.

This international publication is the official journal of the IAMG. *Mathematical Geosciences* is an essential reference for researchers and practitioners of geomathematics, related models, algorithms and computing, who develop and apply data science methods and quantitative models to earth science and geo-engineering problems.

Impact Factor: 1.966 (2018), Journal Citation Reports®
