Molecular and Cellular Biochemistry
An International Journal for Chemical Biology in Health and Disease
Editor: N.S. Dhalla

- Publishes original research papers and short communications in all areas of the biochemical sciences
- Coverage includes membrane transport, receptor mechanism, immune response, secretory processes, and cytoskeletal function
- Also publishes state of the art reviews
- 100% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

Molecular and Cellular Biochemistry: An International Journal for Chemical Biology in Health and Disease publishes original research papers and short communications in all areas of the biochemical sciences, emphasizing novel findings relevant to the biochemical basis of cellular function and disease processes, as well as the mechanics of action of hormones and chemical agents. Coverage includes membrane transport, receptor mechanism, immune response, secretory processes, and cytoskeletal function, as well as biochemical structure-function relationships in the cell.

In addition to the reports of original research, the journal publishes state of the art reviews. Specific subjects covered by Molecular and Cellular Biochemistry include cellular metabolism, cellular pathophysiology, enzymology, ion transport, lipid biochemistry, membrane biochemistry, molecular biology, nuclear structure and function, and protein chemistry.

Impact Factor: 2.561 (2017), Journal Citation Reports®
