Neuropsychology Review
Editors-in-Chief: S.C. Bowden; D.W. Loring

- Focuses on clinical populations and clinical problems in neuropsychology
- Topics include neurocognitive features of central nervous system disease and injury; challenges in early diagnosis; the impact of ethnicity; risk factors for cognitive impairment; and more
- Discusses strengths and weaknesses in the literature, and propose new methods, hypotheses and links to other disciplines

Please note, we are currently updating the 2018 Journal Metrics.

Neuropsychology Review is devoted to integrative review papers in all aspects of neuroscience contributing to a mechanistic understanding of human neuropsychology in normal and clinical populations.

The journal's broad perspective is supported by an outstanding, multidisciplinary editorial board. The journal aims to publish scholarly articles that summarize and synthesize strengths and weaknesses in the literature and propose novel hypotheses, models, methods of analysis and links to other fields.

Impact Factor: 5.739 (2018), Journal Citation Reports®
