Nonlinear Dynamics

An International Journal of Nonlinear Dynamics and Chaos in Engineering Systems

Editor-in-Chief: W. Lacarbonara

- **Encompasses all nonlinear dynamic phenomena associated with mechanical, structural, civil, aeronautical, ocean, electrical, and control systems**
- **Publishes review articles and original contributions based on analytical, computational, and experimental methods**
- **Examines such topics as perturbation and computational methods, symbolic manipulation, dynamic stability, local and global methods, bifurcations, chaos, etc**
- **99% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again**

Nonlinear Dynamics provides a forum for the rapid publication of original research in the field. The journal's scope encompasses all nonlinear dynamic phenomena associated with mechanical, structural, civil, aeronautical, ocean, electrical, and control systems. Review articles and original contributions are based on analytical, computational, and experimental methods.

The journal examines such topics as perturbation and computational methods, symbolic manipulation, dynamic stability, local and global methods, bifurcations, chaos, and deterministic and random vibrations. The journal also investigates Lie groups, multibody dynamics, robotics, fluid-solid interactions, system modeling and identification, friction and damping models, signal analysis, and measurement techniques.

Impact Factor: 4.604 (2018), Journal Citation Reports®
