SpringerBriefs in Mathematical Methods

Subseries of SpringerBriefs in Applied Sciences and Technology

Series Editors: A. Marciniak-Czochra, Th. Reichelt

Mathematical Methods is a new series of SpringerBriefs devoted to non-standard and fresh mathematical approaches to problems in applied sciences. Compact volumes of 50 to 125 pages, each presenting a concise summary of a mathematical theory, and providing a novel application in natural sciences, humanities or other fields of mathematics. The series is intended for applied scientists and mathematicians searching for innovative mathematical methods to address problems arising in modern research. Examples of such topics include: algebraic topology applied in medical image processing, stochastic semigroups applied in genetics, or measure theory applied in differential equations.
