Editor-in-Chief: E.E. Fesenko

- ▶ Presents research related to the main physical mechanisms of processes at different organization levels in biosystems
- ▶ Multidisciplinary coverage includes structure and dynamics of molecules, cells and tissues; the influence of environment; energy transformation and transfer; thermodynamics; biological motility; population dynamics and cell differentiation modeling; and more
- ▶ Also publishes letters, reviews and mini-reviews on problems of general interest

*Biophysics* is a multidisciplinary international peer reviewed journal that covers a wide scope of problems related to the main physical mechanisms of processes taking place at different organization levels in biosystems. It includes structure and dynamics of macromolecules, cells and tissues; the influence of environment; energy transformation and transfer; thermodynamics; biological motility; population dynamics and cell differentiation modeling; biomechanics and tissue rheology; nonlinear phenomena, mathematical and cybernetics modeling of complex systems; and computational biology. The journal publishes short communications devoted and review articles.

**PEER REVIEW**

*Biophysics* is a peer reviewed journal. We use a single blind peer review format. Our team of reviewers includes over 90 experts from 8 countries. The average period from submission to first decision in 2018 was 45 days, and that from first decision to acceptance was 15 days. The rejection rate for submitted manuscripts in 2018 was 35%.

Any invited reviewer who feels unqualified or unable to review the manuscript due to the conflict of interests should promptly notify the editors and decline the invitation. Reviewers should formulate their statements clearly in a sound and reasoned way so that authors can use reviewer's arguments to improve the manuscript. Personal criticism of the authors must be avoided. Reviewers should indicate in a review (i) any relevant published work that has not been cited by the authors, (ii) anything that has been reported in previous publications and not given appropriate reference or citation, (ii) any substantial similarity or overlap with any other manuscript (published or unpublished) of which they have personal knowledge.
