Frontiers of Physics
Editors-in-Chief: K.-T. Chao

- Facilitates communication among physicists and students around the world
- Includes important articles selected from leading Chinese academic journals
- Covers physics of particles and field theory; astrophysics and cosmology; condensed matter physics; statistical physics and nonlinear science; physics of plasmas and more

Please note, we are currently updating the 2018 Journal Metrics.

Frontiers of Physics facilitates communication and exchange among scientists by reporting significant advances made in universities and academic institutions worldwide in nearly all fields of physics. The journal publishes review articles, original research papers, and rapid communications by individual physicists and research groups.

The journal spans a wide range of topics, reporting experiments, techniques and ideas that advance the understanding of physics worldwide. Among the fields covered are physics of quantum mechanics and quantum information; gravitation, cosmology and astrophysics; elementary particles and fields; nuclear physics; atomic, molecular and optical physics; statistical and nonlinear physics; plasma physics and accelerator physics; condensed matter physics; nanostructures and functional materials; and soft matter, biological physics and interdisciplinary physics.

Impact Factor: 2.483 (2018), Journal Citation Reports®
