Izvestiya, Atmospheric and Oceanic Physics
Editor-in-Chief: G.S. Golitsyn

- Covers vital issues in the physics of the earth’s atmosphere and hydrosphere, and climate theory
- Examines recent investigations into physical processes in the atmosphere and ocean that control climate, weather, and their changes
- Includes conference proceedings, book reviews, and more

Izvestiya, Atmospheric and Oceanic Physics is a journal that publishes original scientific research and review articles on vital issues in the physics of the Earth’s atmosphere and hydrosphere and climate theory. The journal presents results of recent studies of physical processes in the atmosphere and ocean that control climate, weather, and their changes. These studies have possible practical applications. The journal also gives room to the discussion of results obtained in theoretical and experimental studies in various fields of oceanic and atmospheric physics, such as the dynamics of gas and water media, interaction of the atmosphere with the ocean and land surfaces, turbulence theory, heat balance and radiation processes, remote sensing and optics of both media, natural and man-induced climate changes, and the state of the atmosphere and ocean. The journal publishes papers on research techniques used in both media, current scientific information on domestic and foreign events in the physics of the atmosphere and ocean.

PEER REVIEW Izvestiya, Atmospheric and Oceanic Physics is a peer reviewed journal. We use a double blind peer review format. Our team of reviewers includes 75 reviewers, both internal and external (90%). The average period from submission to first decision in 2017 was 30 days, and that from first decision to acceptance was 30 days. The final decision on the acceptance of an article for publication is made by the Editorial Board.

Any invited reviewer who feels unqualified or unable to review the manuscript due to the conflict of interests should promptly notify the editors and decline the invitation. Reviewers should formulate their statements clearly in a sound and reasoned way so that authors can use reviewer’s arguments to improve the manuscript. Personal criticism of the authors must be avoided. Reviewers should indicate in a review (i) any relevant published work that has not been cited by the authors, (ii) anything that has been reported in previous publications and not given appropriate reference or citation, (iii) any substantial similarity or overlap with any other manuscript (published or unpublished) of which they have personal knowledge.

Impact Factor: 0.457 (2017), Journal Citation Reports®
