Mechanical Engineering Series

Series Ed.: F.A. Kulacki

The Mechanical Engineering Series presents advanced level treatment of topics on the cutting edge of mechanical engineering. Designed for use by students, researchers and practicing engineers, the series presents modern developments in mechanical engineering and its innovative applications in applied mechanics, bioengineering, dynamic systems and control, energy, energy conversion and energy systems, fluid mechanics and fluid machinery, heat and mass transfer, manufacturing science and technology, mechanical design, mechanics of materials, micro- and nano-science technology, thermal physics, tribology, and vibration and acoustics. The series features graduate-level texts, professional books, and research monographs in key engineering science concentrations.

Recently published:

J.F. Doyle

Wave Propagation in Structures

S. Khandekar, K. Muralidhar

Drop Dynamics and Dropwise Condensation on Textured Surfaces

Z.M. Zhang

Nano/Microscale Heat Transfer

Upcoming Volumes:

G. Ribatski, F. Kanizawa

Flow boiling and condensation in microscale channels

H. Arastoopour, D. Gidaspow, R.W. Lyckowski

Transport Phenomena in Multiphase Systems

G. Sidebotham

An Inductive Approach to Engineering Thermodynamics
