Metallurgical and Materials Transactions A
Principal Editor: T.M. Pollock

Metallurgical and Materials Transactions A focuses on the latest research in all aspects of metallurgy and materials science. The journal publishes original research and reviews that:

- Advance the basic understanding of the relationships among structure across all length scales, physical and mechanical properties, and processing of materials, examined via theory, experiments, advanced characterization, data-driven and machine learning approaches, and validated modeling.

- Concern the main topics of alloy phases; transformations, transport phenomena, mechanical behavior, physical chemistry, environmental performance, welding and joining, coatings and surface treatment, solidification, and thermomechanical processing.

- Address all classes of metallic materials, composite materials, powder-based alloys, intermetallic compounds, multicomponent element alloys, nanocrystalline and amorphous materials, and biomaterials.

Published in partnership with ASM International and The Minerals, Metals & Materials Society

Impact Factor: 1.985 (2018), Journal Citation Reports®
