Journal of Transportation Security

Editor-in-Chief: A.R. Thomas

- ▶ Reflects the new realities of transportation security
- ▶ Offers an apolitical, multidisciplinary perspective of global transportation security
- ▶ Disseminates new research, ideas and analysis for teachers, researchers, policy makers and security practitioners worldwide

9-11 and subsequent events have compelled stakeholders to understand transport security as more than a single element of the global networks that move people and goods. Once a routine component of modern transportation, security now represents a vital necessity and an urgent national priority.

The Journal of Transportation Security probes the relevant aspects of many critical areas of study, including supply chain and logistics; information technology; public policy; international business; political science; engineering; transportation; economics; and counterterrorism, among others. This journal is the first to take a global, apolitical, and in-depth multidisciplinary look at the field.

The mission of the journal is to disseminate new research, thought, and analysis for teachers, researchers, policy makers and practitioners around the world who view transportation security as a critical element in the post 9/11 world.
