Genes & Nutrition
Co-Editor-in-Chief: G. Perozzi; F. Virgili; J. Kaput

- Examines the relationship between genetics and nutrition, with the ultimate goal of improving human health
- Publishes original research articles as well as review articles to help deliver products with medically proven use
- Ideal for nutritionists, healthcare providers and all those interested in preventive medicine

With the ultimate goal of improving human health, Genes and Nutrition is an interdisciplinary journal which examines the relationship between genetics and nutrition. We publish original research articles and review articles on gene-diet and diet-gene relationships coming largely from animal, cell culture, and other experimental models. We also publish critical evaluations of human experimental data and preclinical research data, addressing the effect of bio-active compounds. The journal is ideal for nutritionists, healthcare providers, and all those interested in preventive medicine.

Impact Factor: 2.797 (2016), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access
- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
