Social Psychiatry and Psychiatric Epidemiology
The International Journal for Research in Social and Genetic Epidemiology and Mental Health Services
Editor-in-Chief: C. Morgan

➤ 90% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

Social Psychiatry and Psychiatric Epidemiology is intended to provide a medium for the prompt publication of scientific contributions concerned with all aspects of the epidemiology of psychiatric disorders - social, biological and genetic.

In addition, the journal has a particular focus on the effects of social conditions upon behaviour and the relationship between psychiatric disorders and the social environment. Contributions may be of a clinical nature provided they relate to social issues, or they may deal with specialised investigations in the fields of social psychology, sociology, anthropology, epidemiology, health service research, health economies or public mental health. We will publish papers on cross-cultural and trans-cultural themes. We do not publish case studies or small case series. While we will publish studies of reliability and validity of new instruments of interest to our readership, we will not publish articles reporting on the performance of established instruments in translation.

Both original work and review articles may be submitted.

Impact Factor: 3.152 (2018), Journal Citation Reports®
