Cancer Cell International
Main editor: D. Coppola

- International Editorial Board
- Welcomes research on basic, clinical and translational aspects of cancer

Cancer Cell International publishes articles on all aspects of cancer cell biology. The journal focuses on cancer studies reporting data from biological experiments performed on cells grown in vitro, in two- or three-dimensional systems, and/or in vivo (animal experiments). With its inclusive, sound science policy, the journal welcomes research on basic and translational aspects of cancer. As an established journal with an expert, international Editorial Board, it gives full consideration to manuscripts from countries where open access is particularly beneficial.

Impact Factor: 3.960 (2017), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
