International Journal of Mental Health Systems
Editor-in-Chief: H. Minas

- International authorship, readership and expert editorial board
- Only journal in Web of Science to focus on mental health policy and mental health systems
- All articles are open access: universally accessible online without charge

Advances in understanding and treatment of mental illness often don’t help those who need them most because of poorly developed mental health systems. Globally there is increasing attention to mental health legislation and policy, mental health system financing and governance, mental health service design implementation and evaluation, human resource development, and effective translation of research to inform mental health policy. *International Journal of Mental Health Systems* publishes the latest mental health research and health systems research, reviews and case studies, and so advances and shapes global mental health.

Impact Factor: 1.694 (2017), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
