Molecular Brain
Editor-in-Chief: B.-K. Kaang; T. Bliss; T. Miyakawa
Managing Editor: E. England
Founding Editor: M. Zhuo

- **Official journal of the Association for the Study of Neurons and Diseases**
- **High visibility**
- **Will not request major experimental revisions**

*Molecular Brain* considers all aspects of studies on the nervous system, at the genetic, molecular, cellular and systems levels, which yield key information about the physiological and pathological brain. The official journal of the Association for the Study of Neurons and Disease, this high visibility open access, peer-reviewed journal attracts more than 20,000 accesses per month, and welcomes studies involving the use of a wide range of modern techniques in molecular biology, genomics, proteomics, imaging, electrophysiology and theoretical modelling.

**Electronic access**

Giving authors in their area of expertise
the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
