Contemporary Issues in Technology Education

Series Editors: P.J. Williams, M.J. de Vries

Technology education is a developing field, new issues keep arising and timely, relevant research is continually being conducted. The aim of this series is to draw on the latest research to focus on contemporary issues, create debate and push the boundaries in order to expand the field of technology education and explore new paradigms. Maybe more than any other subject, technology education has strong links with other learning areas, including the humanities and the sciences, and exploring these boundaries and the gaps between them will be a focus of this series. Much of the literature from other disciplines has applicability to technology education, and harnessing this diversity of research and ideas with a focus on technology will strengthen the field. Occasional volumes on a bi-annual basis will be published under the Council for Technology and Engineering Teacher Education (CTETE) inside this series.
