Dermatology and Therapy

Research, treatment and aesthetic interventions in dermatology

Co-Editors-in-Chief: A. Menter

Co-Editor-in-Chief: R. Warren

Dermatology and Therapy is an international, open access, peer-reviewed, rapid publication journal (peer review in 2 weeks, published 3–4 weeks from acceptance). The journal is dedicated to the publication of high-quality preclinical, clinical (all phases), observational, real-world, and health outcomes research around the discovery, development, and use of dermatological therapies. Studies relating to diagnosis, pharmacoeconomics, public health and epidemiology, quality of life, and patient care, management, and education are also encouraged.

Areas of focus include, but are not limited to all clinical aspects of dermatology, such as skin pharmacology; skin development and aging; prevention, diagnosis, and management of skin disorders and melanomas; research into dermal structures and pathology; and all areas of aesthetic dermatology, including skin maintenance, dermatological surgery, and lasers.

The journal is of interest to a broad audience of pharmaceutical and healthcare professionals and publishes original research, reviews, case reports, and short communications. The journal appeals to a global audience and receives submissions from all over the world. Articles published in *Dermatology and Therapy* may be accompanied by lay-level summaries, to assist patients (and caregivers) in understanding important medical advances.

Moving forward from traditional publishing, *Dermatology and Therapy* offers a range of additional enhanced features designed to increase visibility, readership, and the educational value of the content. Each paper is accompanied by a bulleted Summary slide, giving a time-efficient overview of the content to a wide readership. Articles also have the option to include various other types of enhanced features including slide sets, videos and animations. All enhanced features are open access and are peer reviewed to the same high standard as the article itself.

Dermatology and Therapy is published under the Creative Commons Attribution-Noncommercial License, which allows users to read, copy, distribute, and make derivative works for non-commercial purposes from the material, as long as the author of the original work is cited. The author assigns the exclusive right to any commercial use of the article to Springer.

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
