

## **Signal Processing for Security Technologies**

Series Ed.: M.E. Celebi

Recent advances in sensor technology and computer hardware have led to an explosion in the number and diversity of signal processing applications in a variety of disciplines and domains, with security seeing a particularly strong impact. The goal of Springer's Signal Processing for Security Technologies book series is to cover the latest theoretical and practical developments in the processing of various types of signals (audio, speech, chemical, radar, sonar, image, video, etc.) for security applications. The intended audience includes students, researchers, and practitioners.
