

## **Graduate Texts in Operations Research**

Series Editors: R. Boucherie, J. Hurink

This series contains compact volumes on the mathematical foundations of Operations Research, in particular in the areas of continuous, discrete and stochastic optimization. Inspired by the PhD course program of the Dutch Network on the Mathematics of Operations Research (LNMB), and by similar initiatives in other territories, the volumes in this series offer an overview of mathematical methods for post-master students and researchers in Operations Research. Books in the series are based on the established theoretical foundations in the discipline, teach the needed practical techniques and provide illustrative examples and applications.

### **Recently published:**

J. Brinkhuis

#### **Convex Analysis for Optimization**

A Unified Approach

W.K. Klein Haneveld, M.H. van der Vlerk, W. Romeijnders

#### **Stochastic Programming**

Modeling Decision Problems Under Uncertainty
