Foundations of Engineering Mechanics

Series Editors: V.I. Babitsky, J. Wittenburg

The series "Foundations of Engineering Mechanics" includes scientific monographs and graduate-level textbooks on relevant and modern topics of application-oriented mechanics. In particular, the aim of the series is to present selected works of Russian and Eastern European scientists, so far not published in Western countries, drawing from the large pool of experience from major technological research projects. By contributing to the long tradition of enrichment of Western science and teaching by Eastern sources, the volumes of the series address to scientists, institutional and industrial researchers, lecturers and graduate students.

Recently published:

G. Szeidl, L.P. Kiss

Mechanical Vibrations

An Introduction

R. Ganguli, V. Panchore

The Rotating Beam Problem in Helicopter Dynamics

I.T. Selezov, Y.G. Kryvonos, I.S. Gandzha

Wave Propagation and Diffraction

Mathematical Methods and Applications

Upcoming Volumes:

N.N. Polyakhov, P.E. Tovstik, M. Yushkov, S.A. ZegzhdaP.E. Tovstik (Ed.)

Rational and Applied Mechanics

Volume 2. Special Problems and Applications

N.N. Polyakhov, M. Yushkov, S.A. ZegzhdaP.E. Tovstik (Ed.)

Rational and Applied Mechanics

Volume 1. Complete General Course for Students of Engineering

S.A. Ambartsumian

Micropolar Theory of Shells and Plates
